

The Sissing Bus On the Ocean Floor

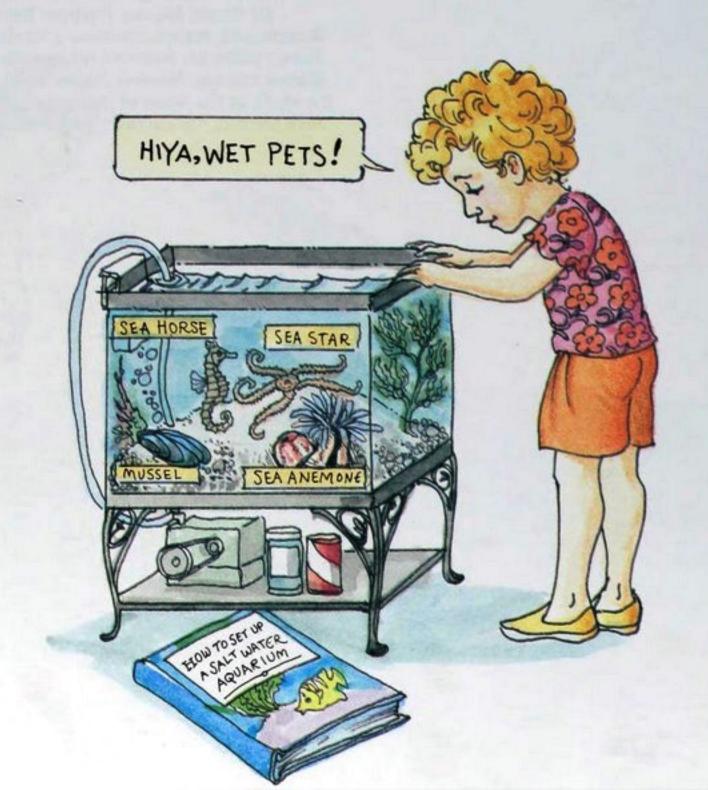

The Sissing Bus On the Ocean Floor

By Joanna Cole / Illustrated by Bruce Degen

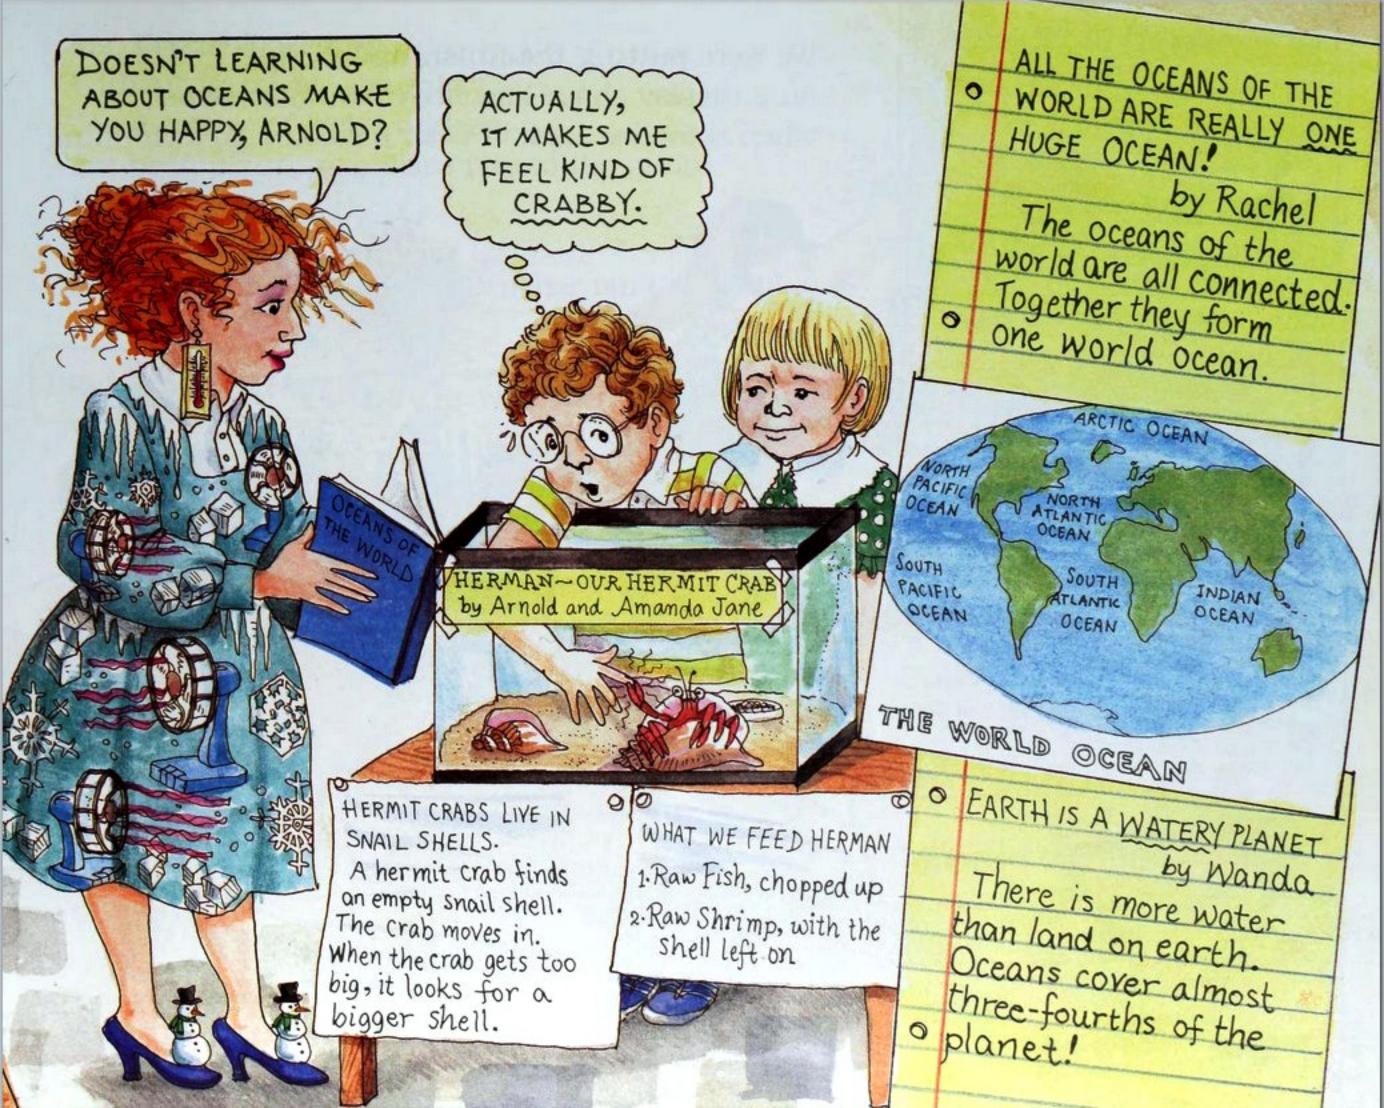

The ocean animals and plants are labeled only at their first appearance within the story.

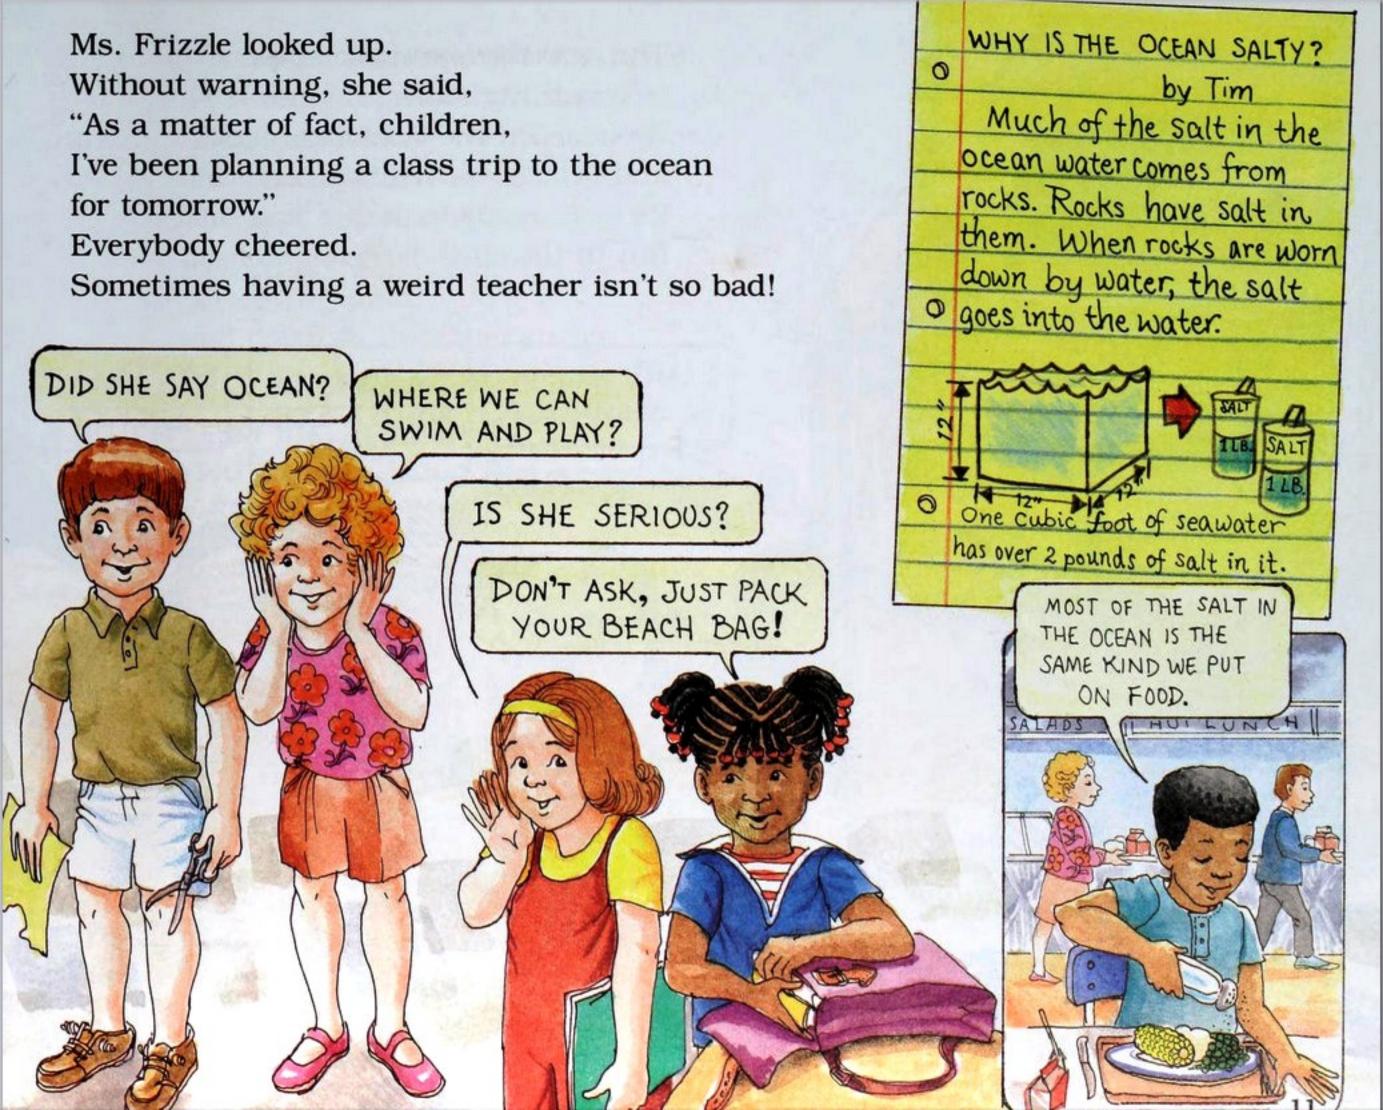

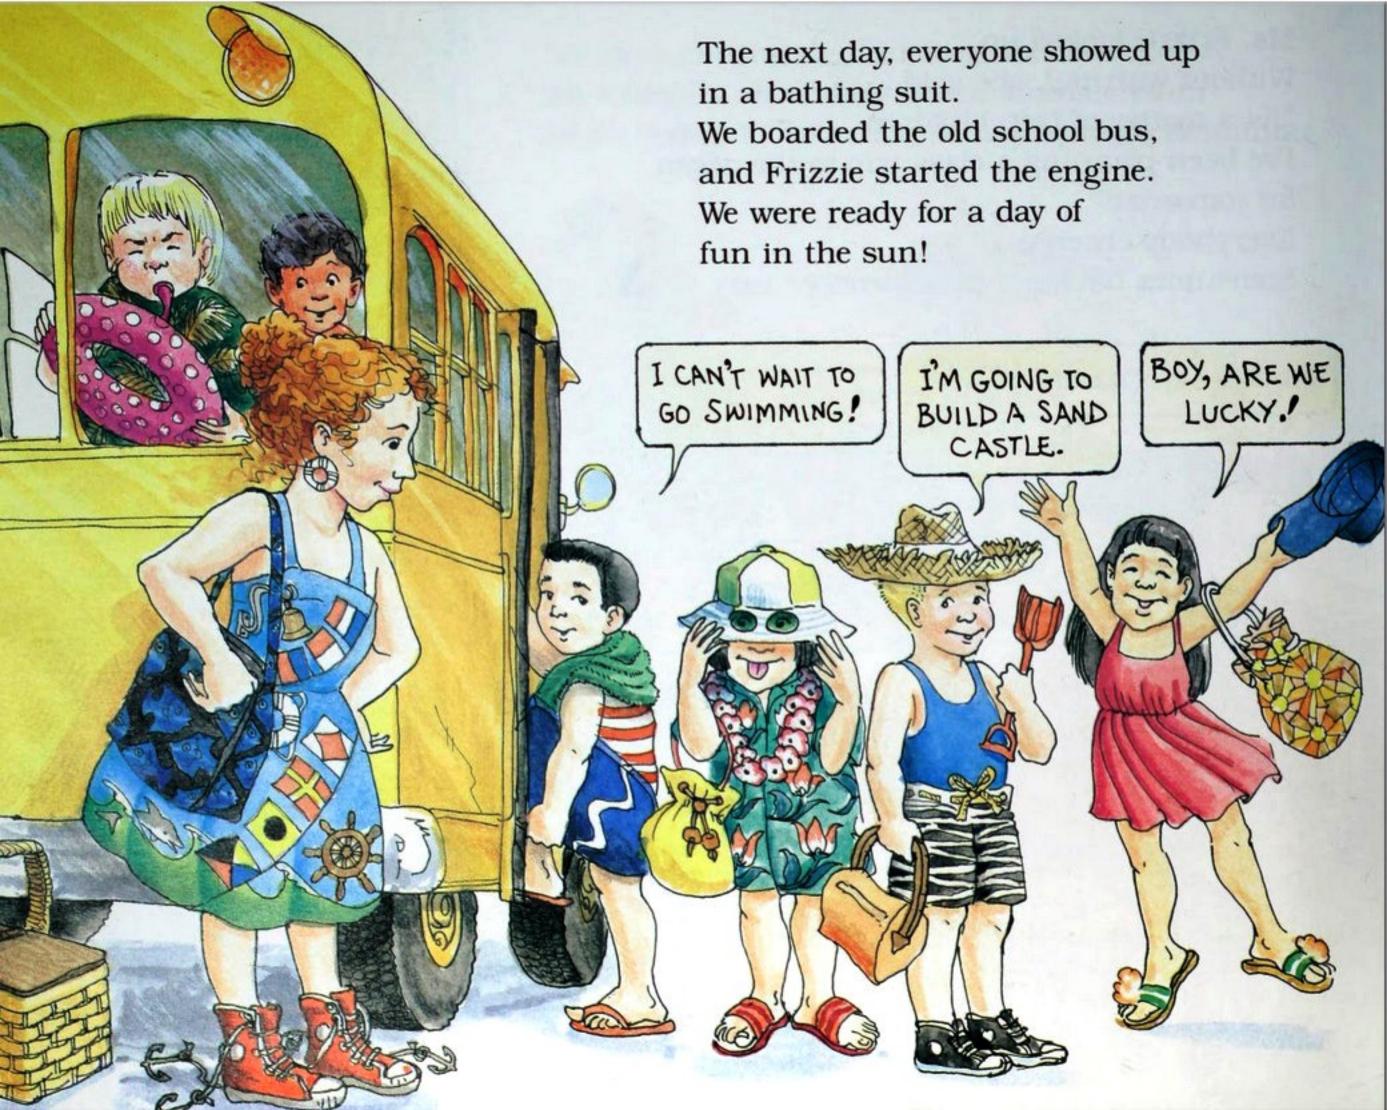

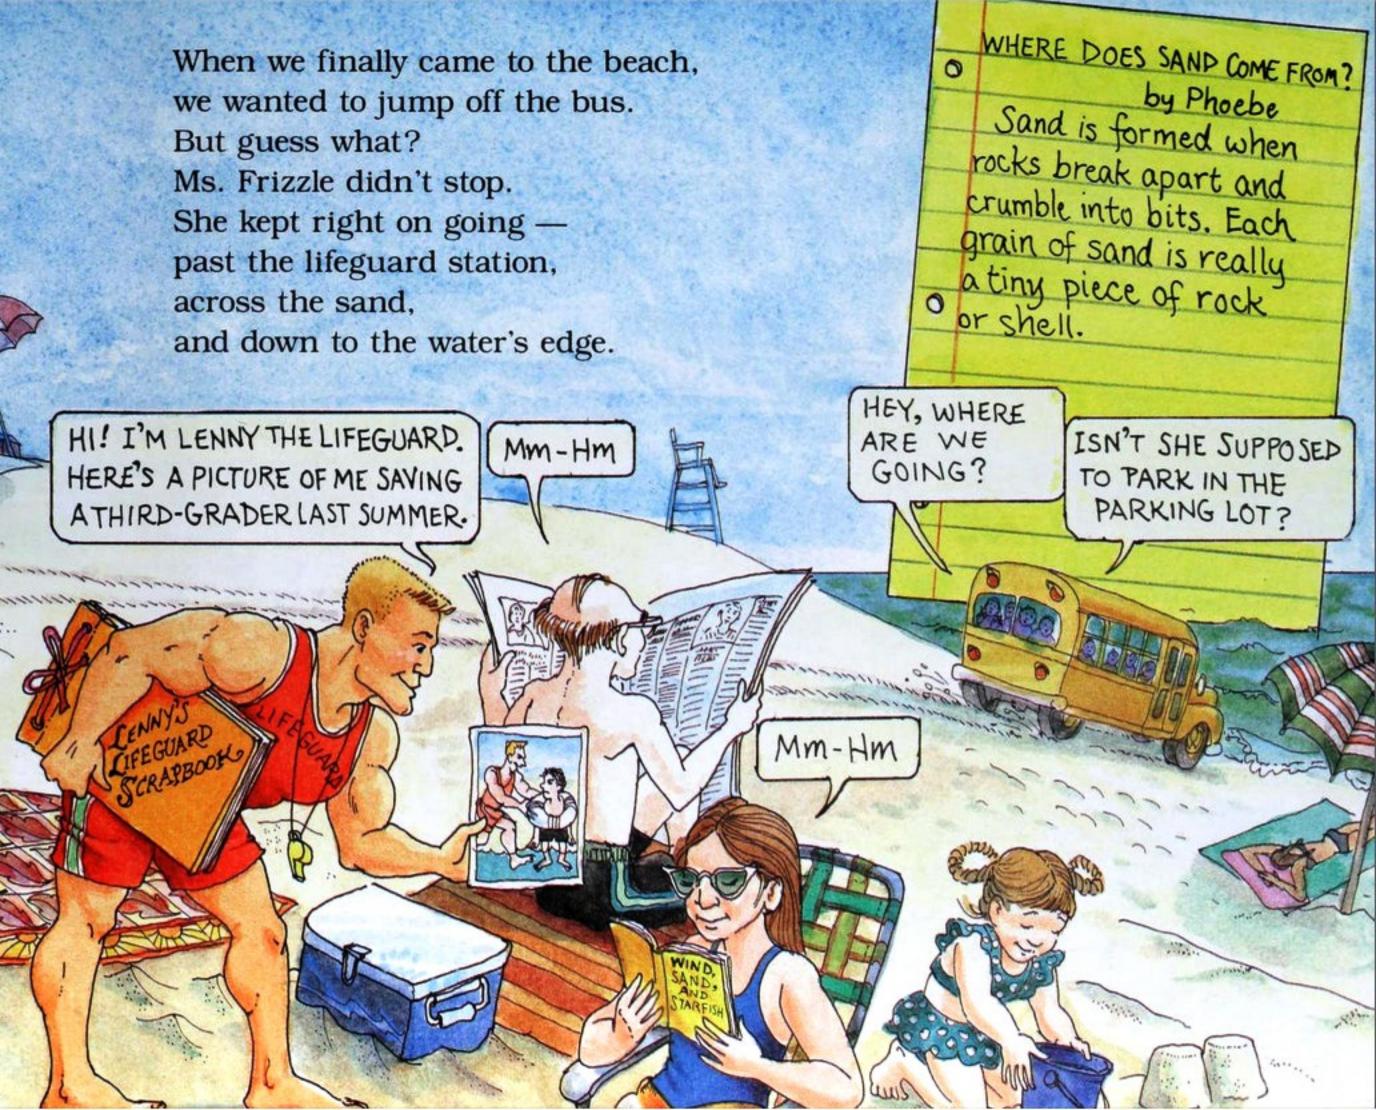

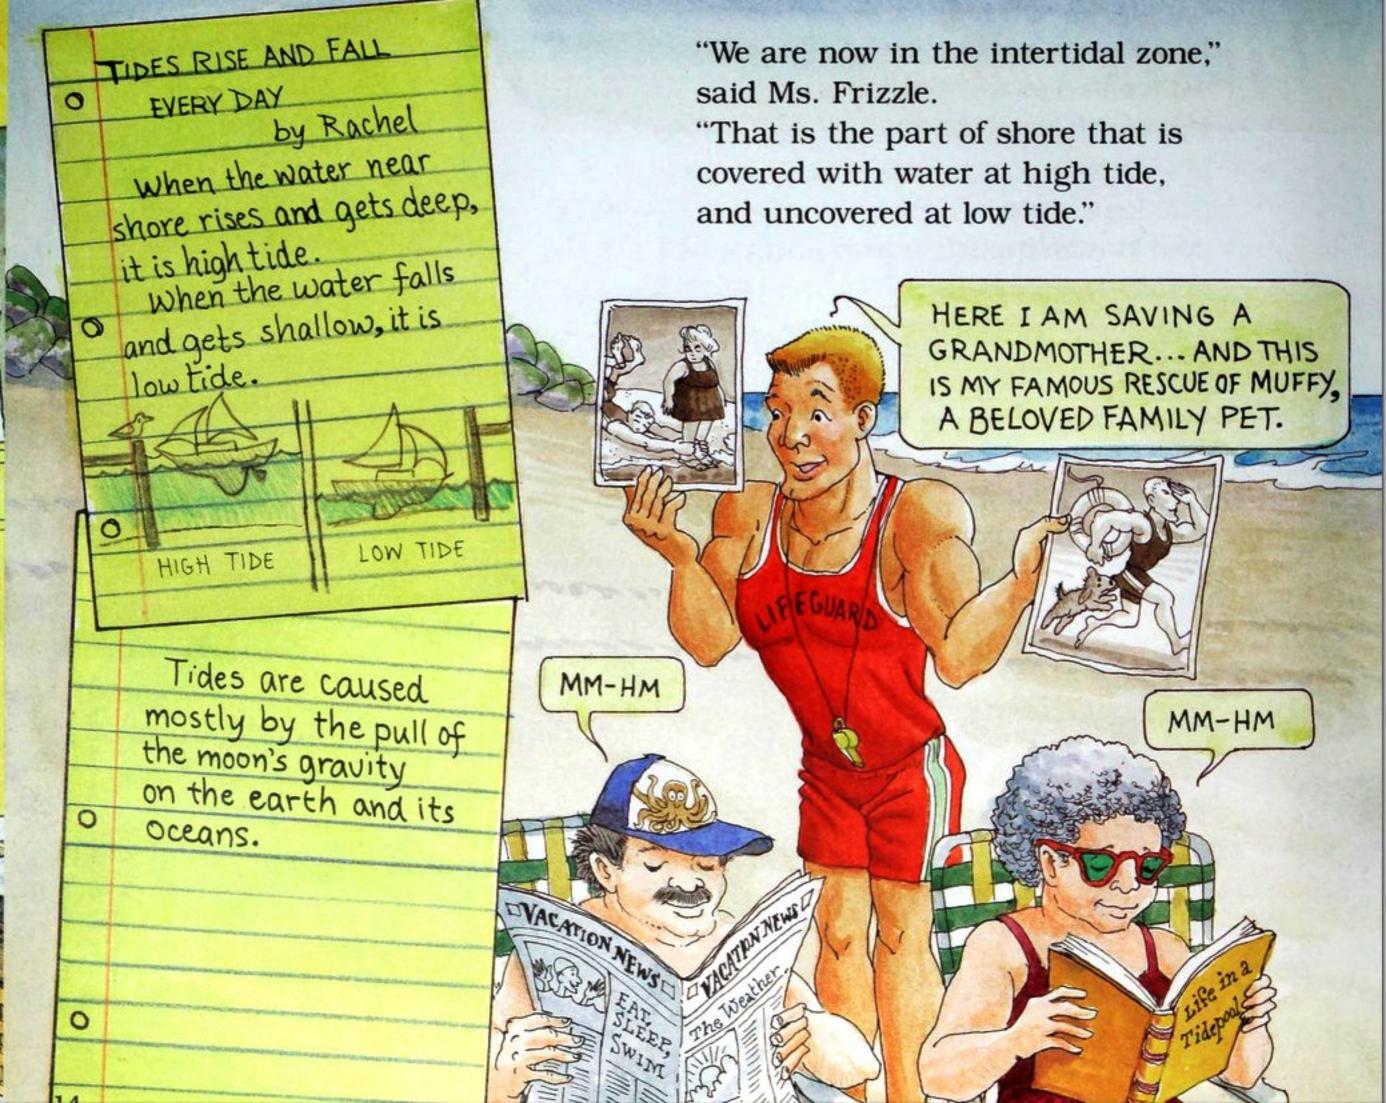

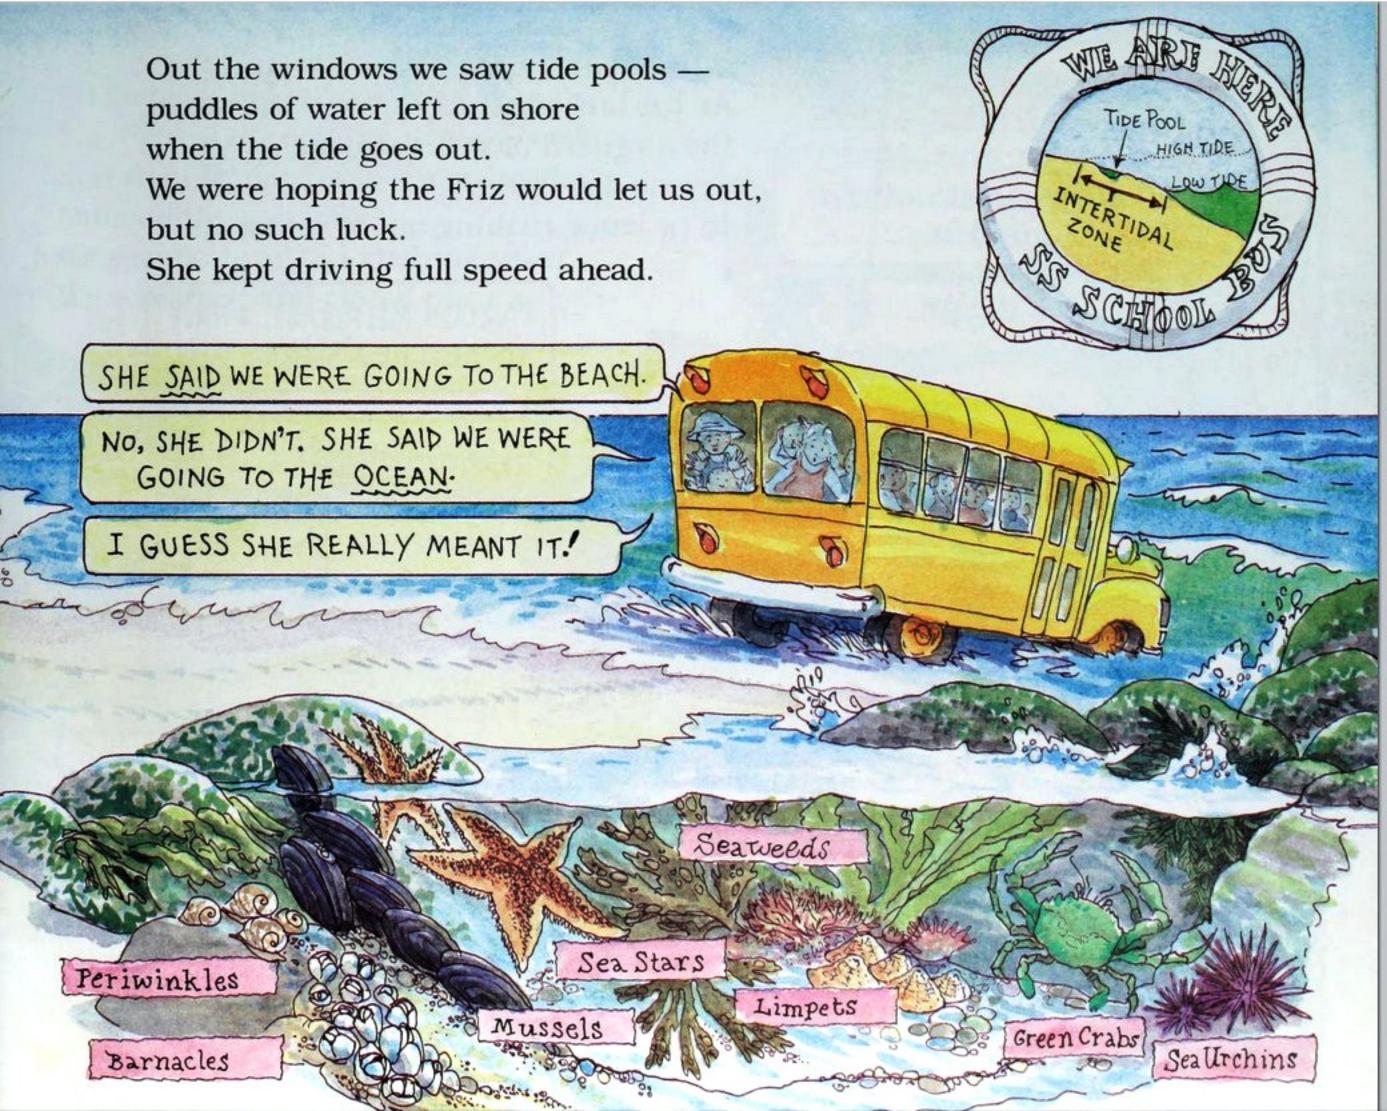

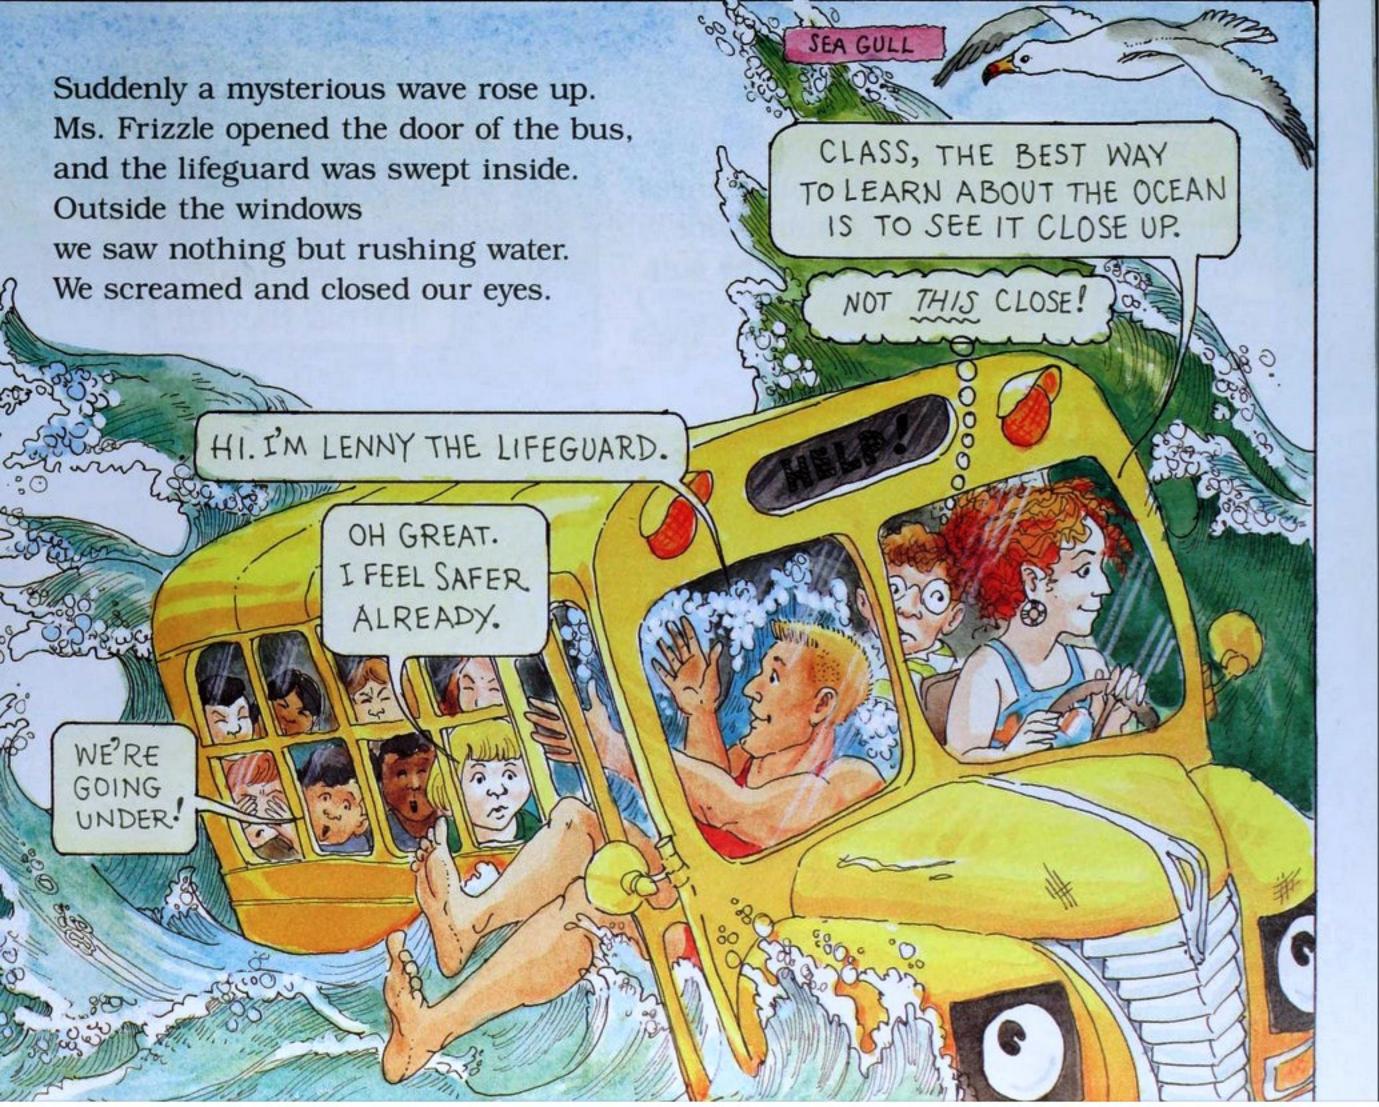

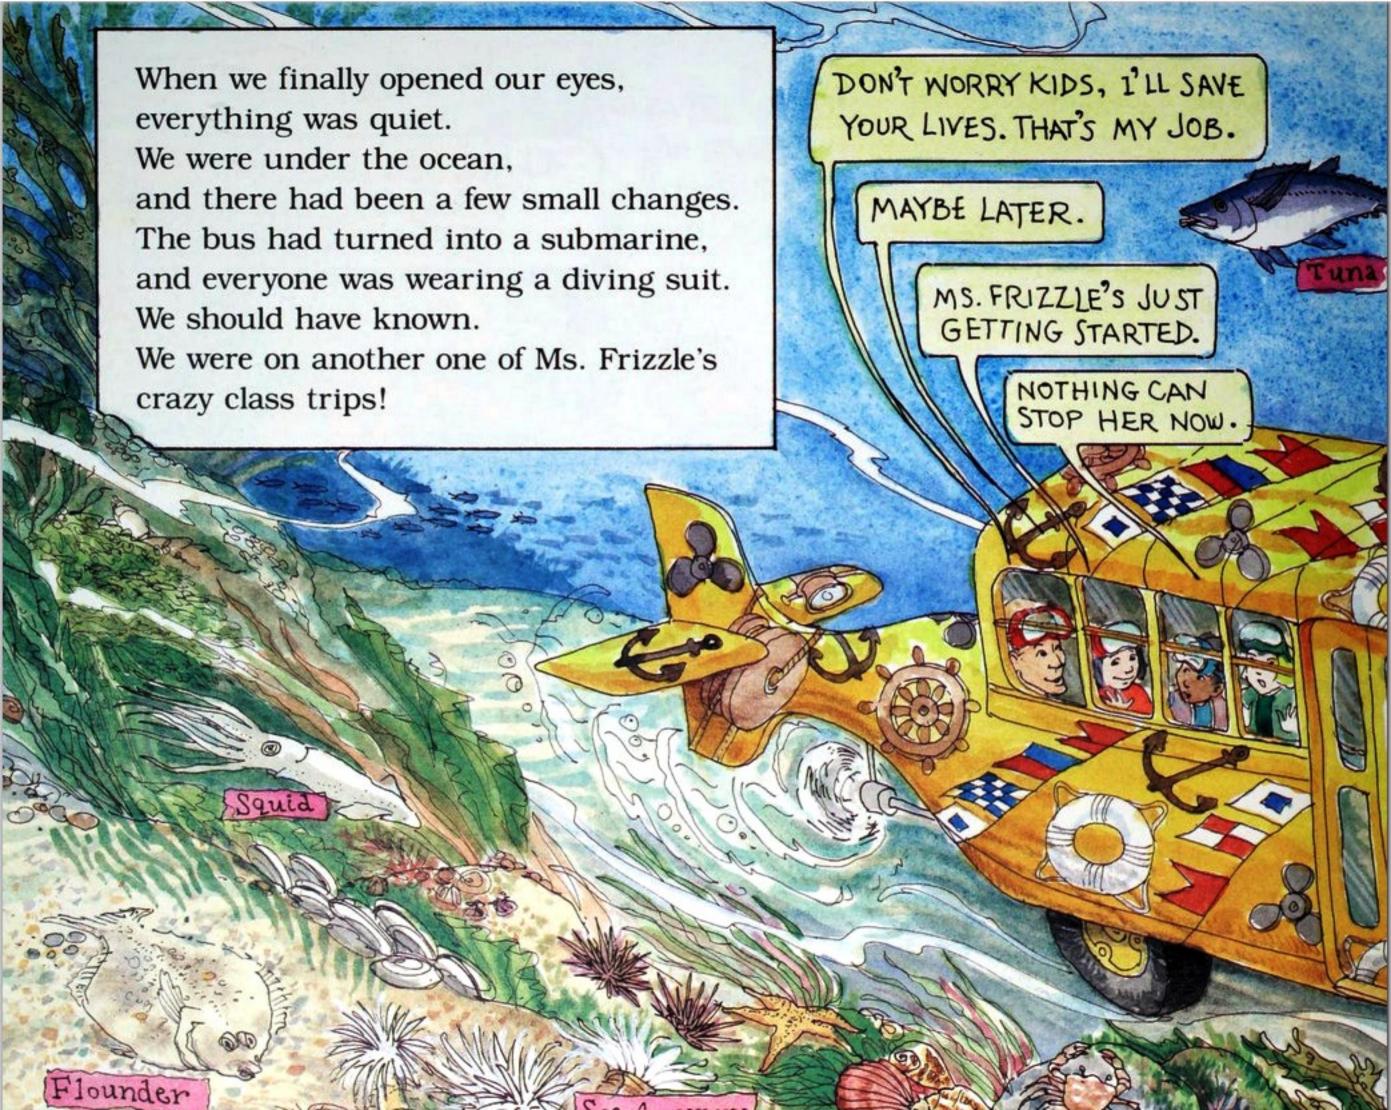

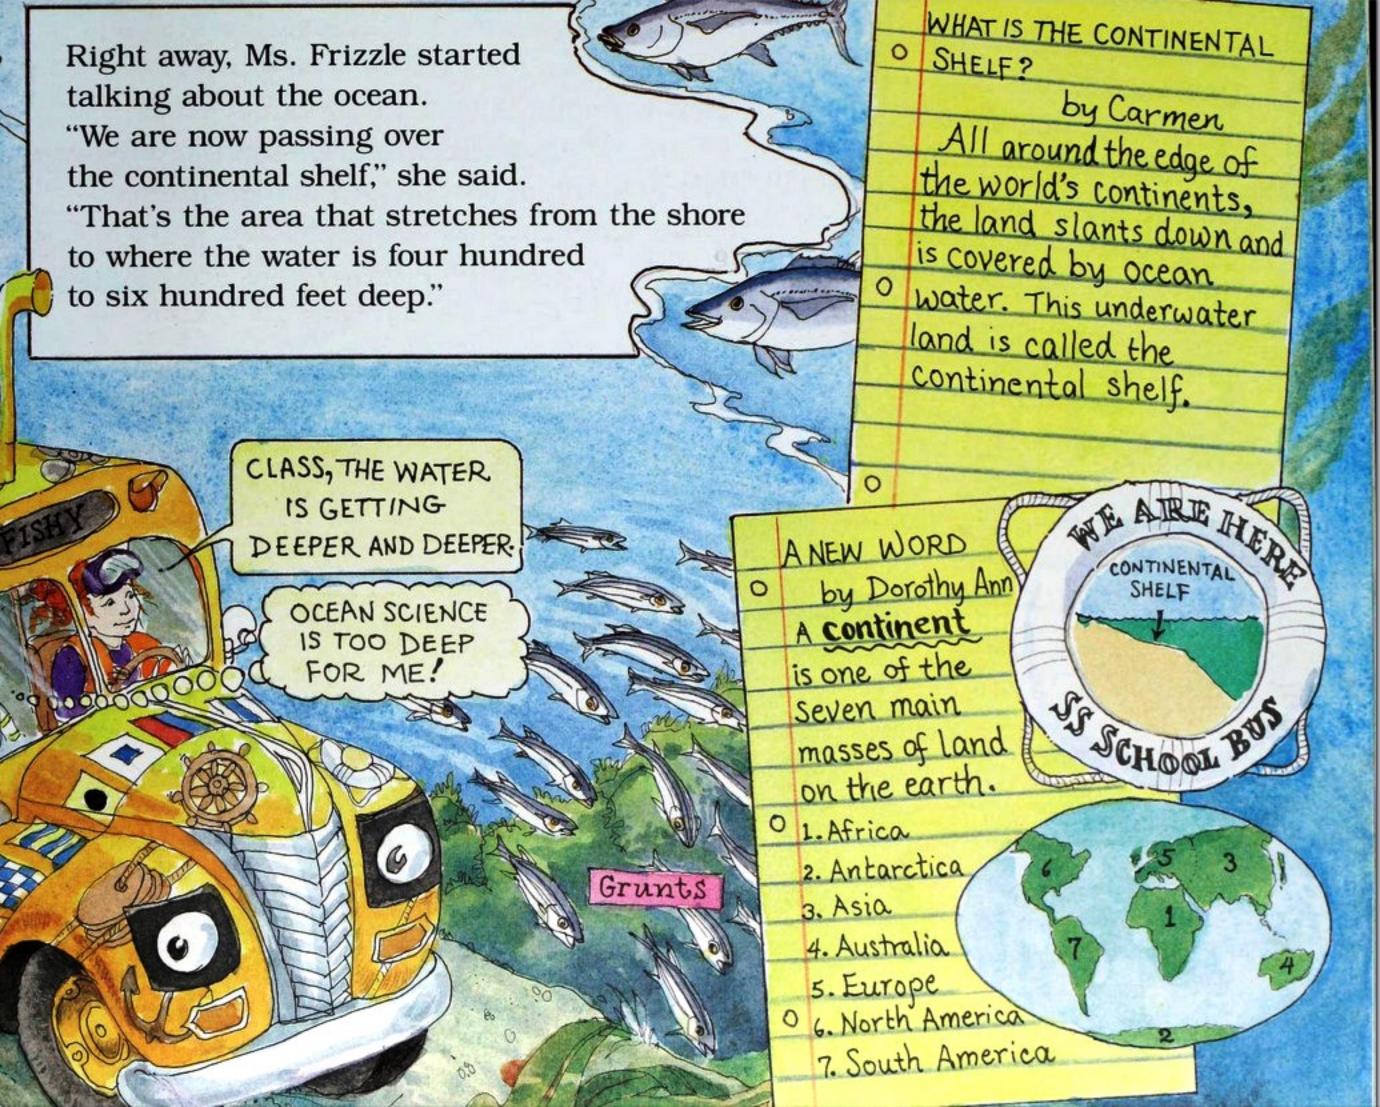

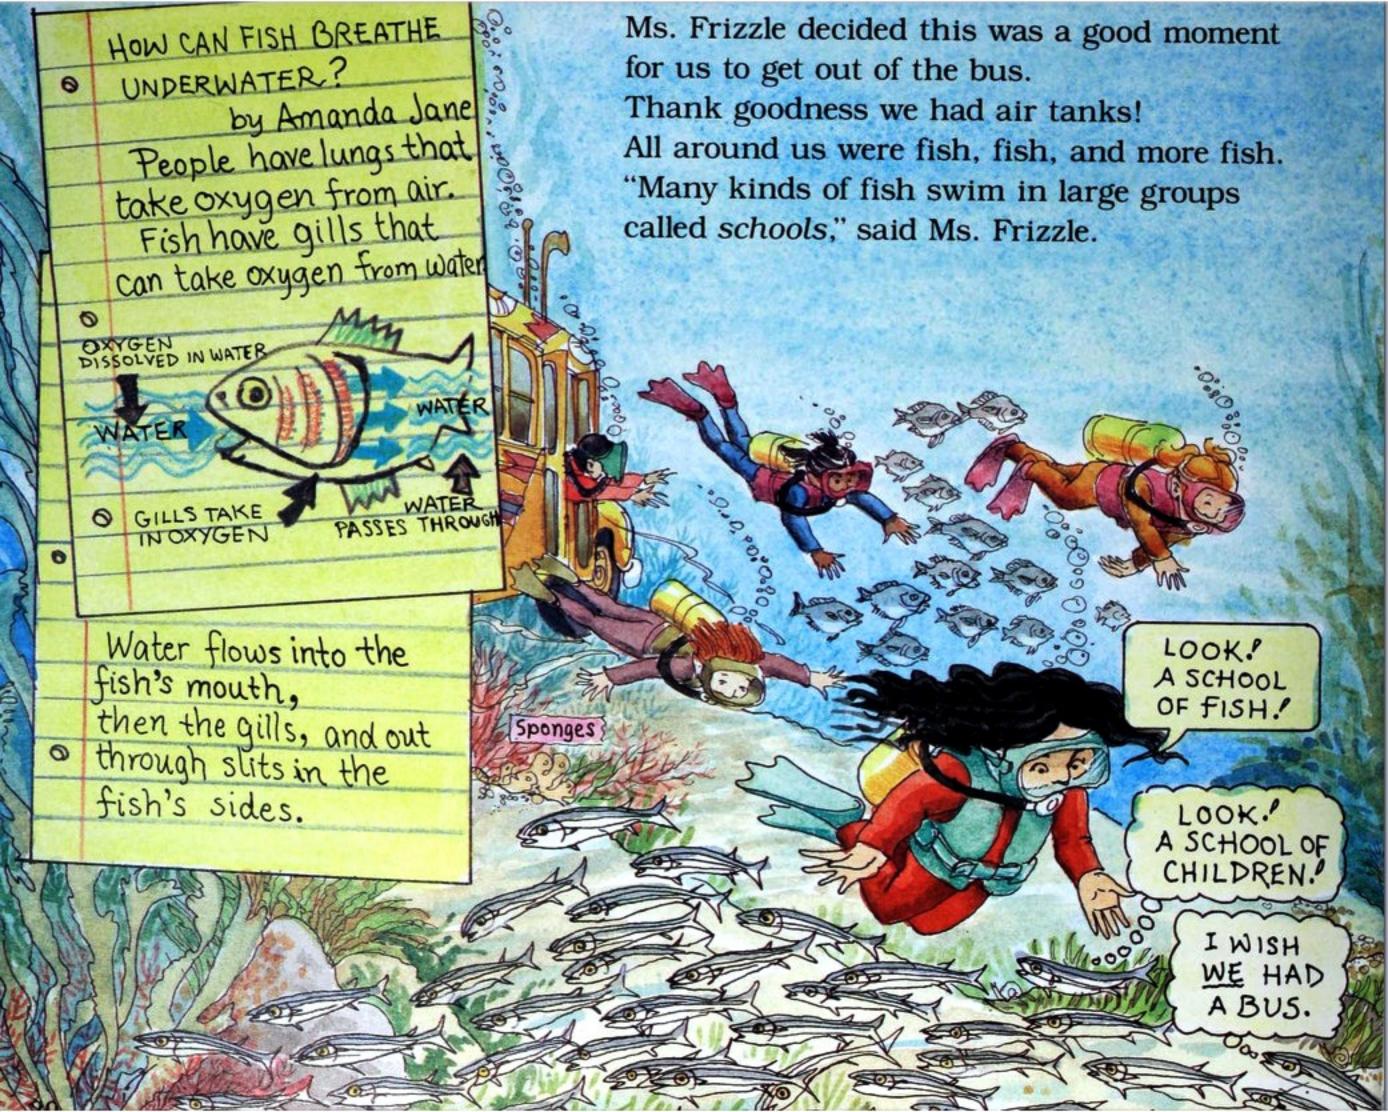

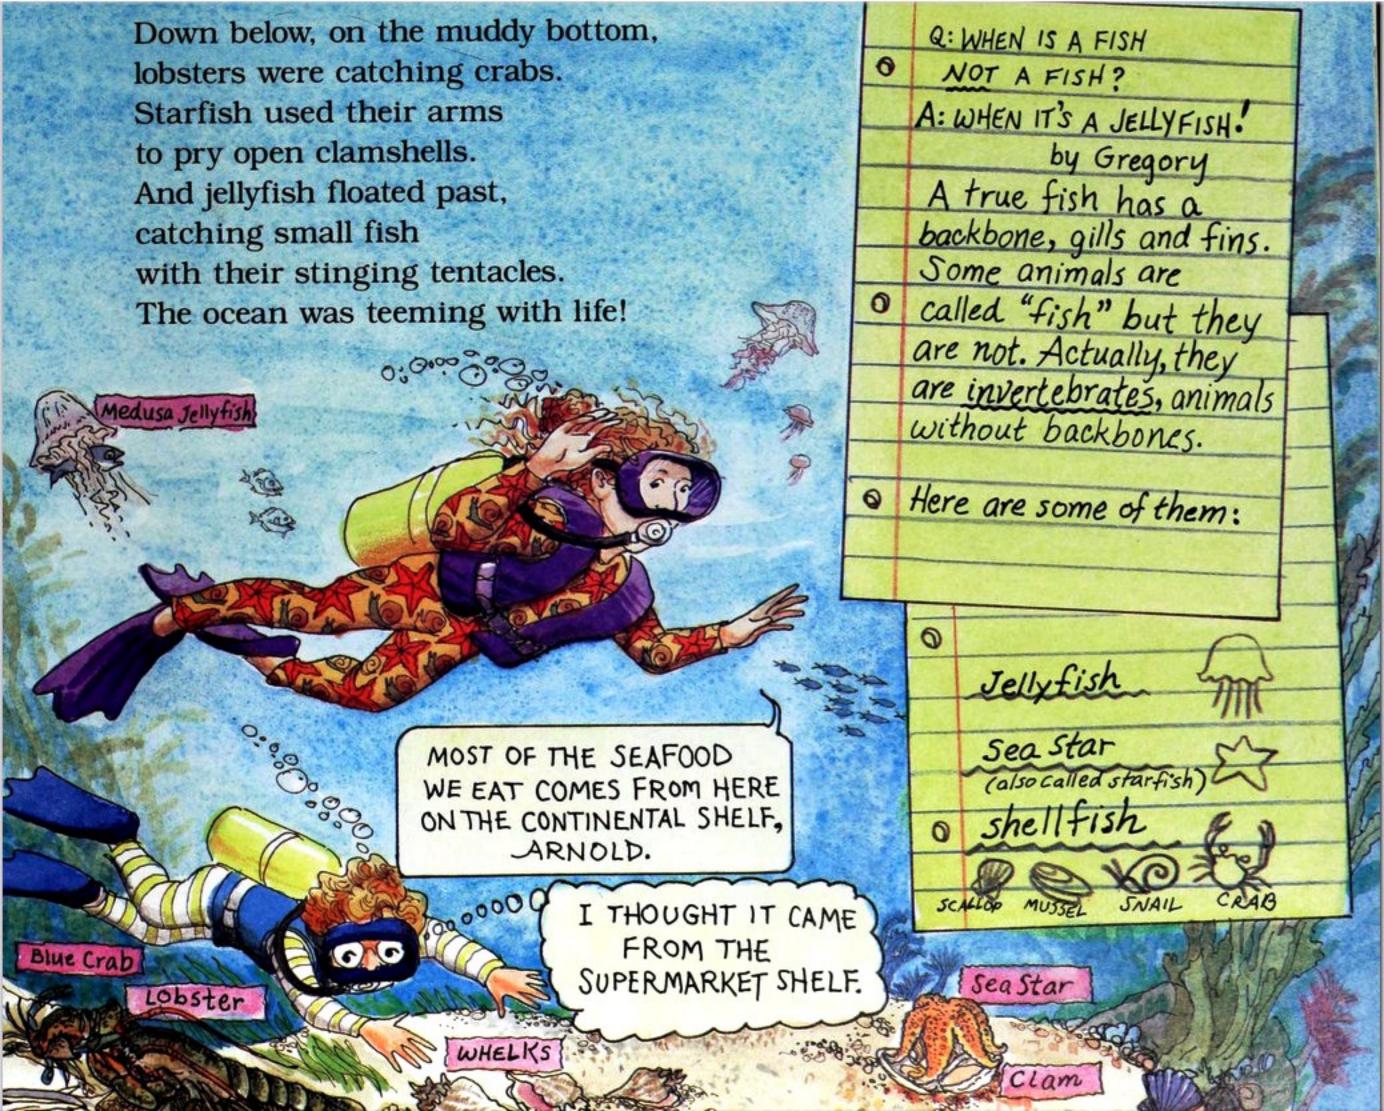

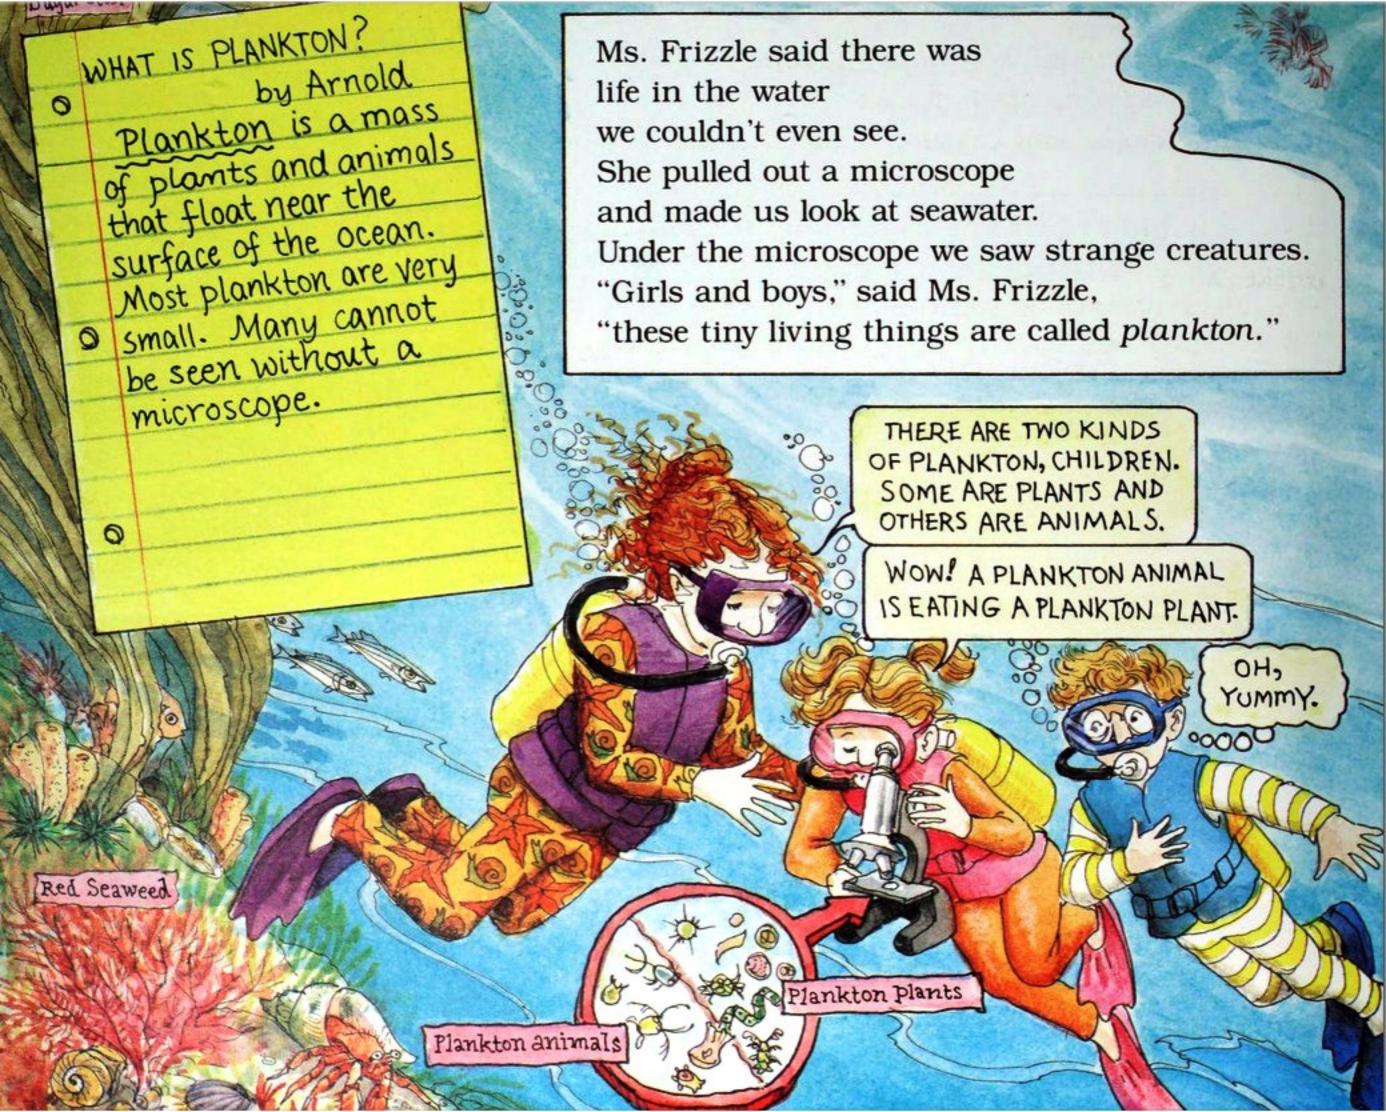

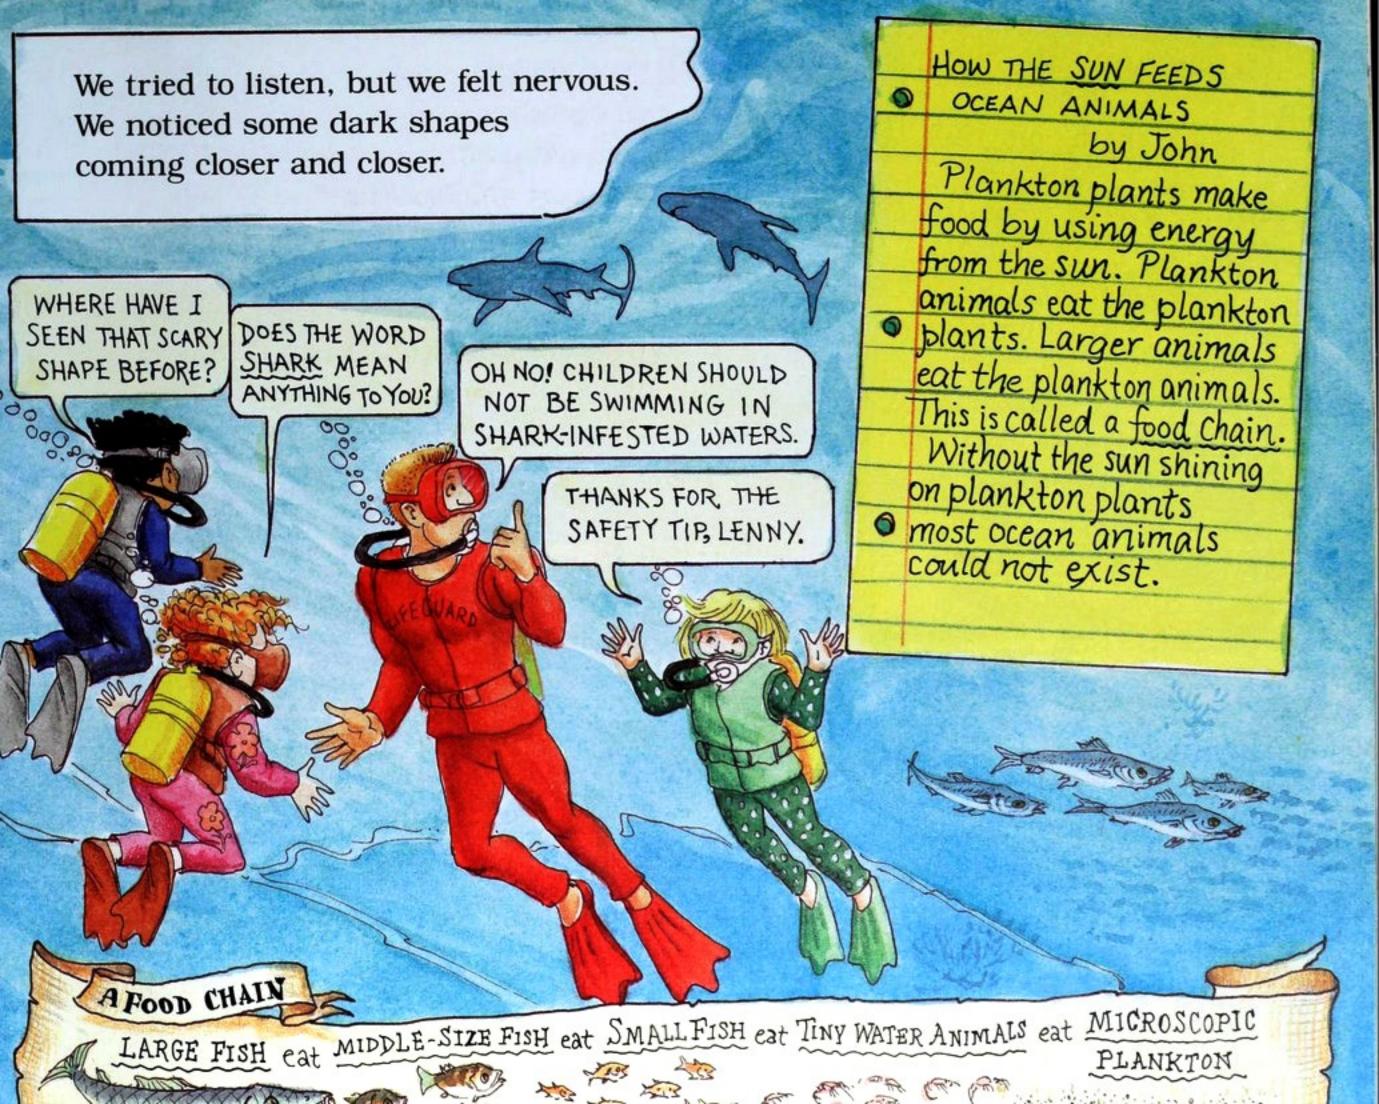

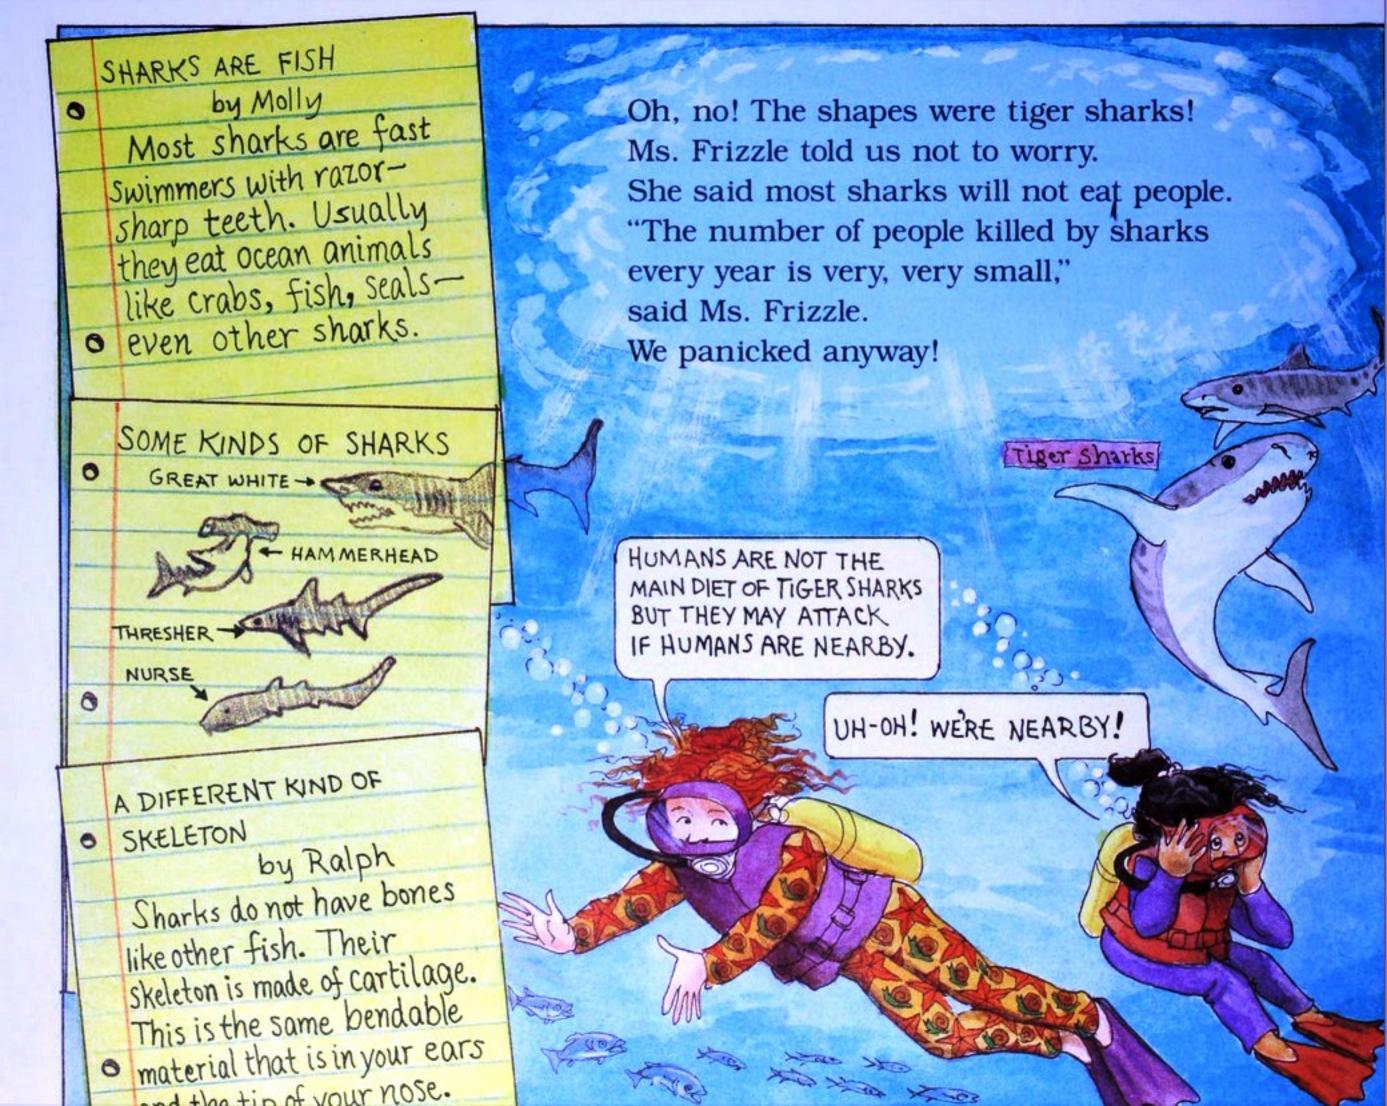

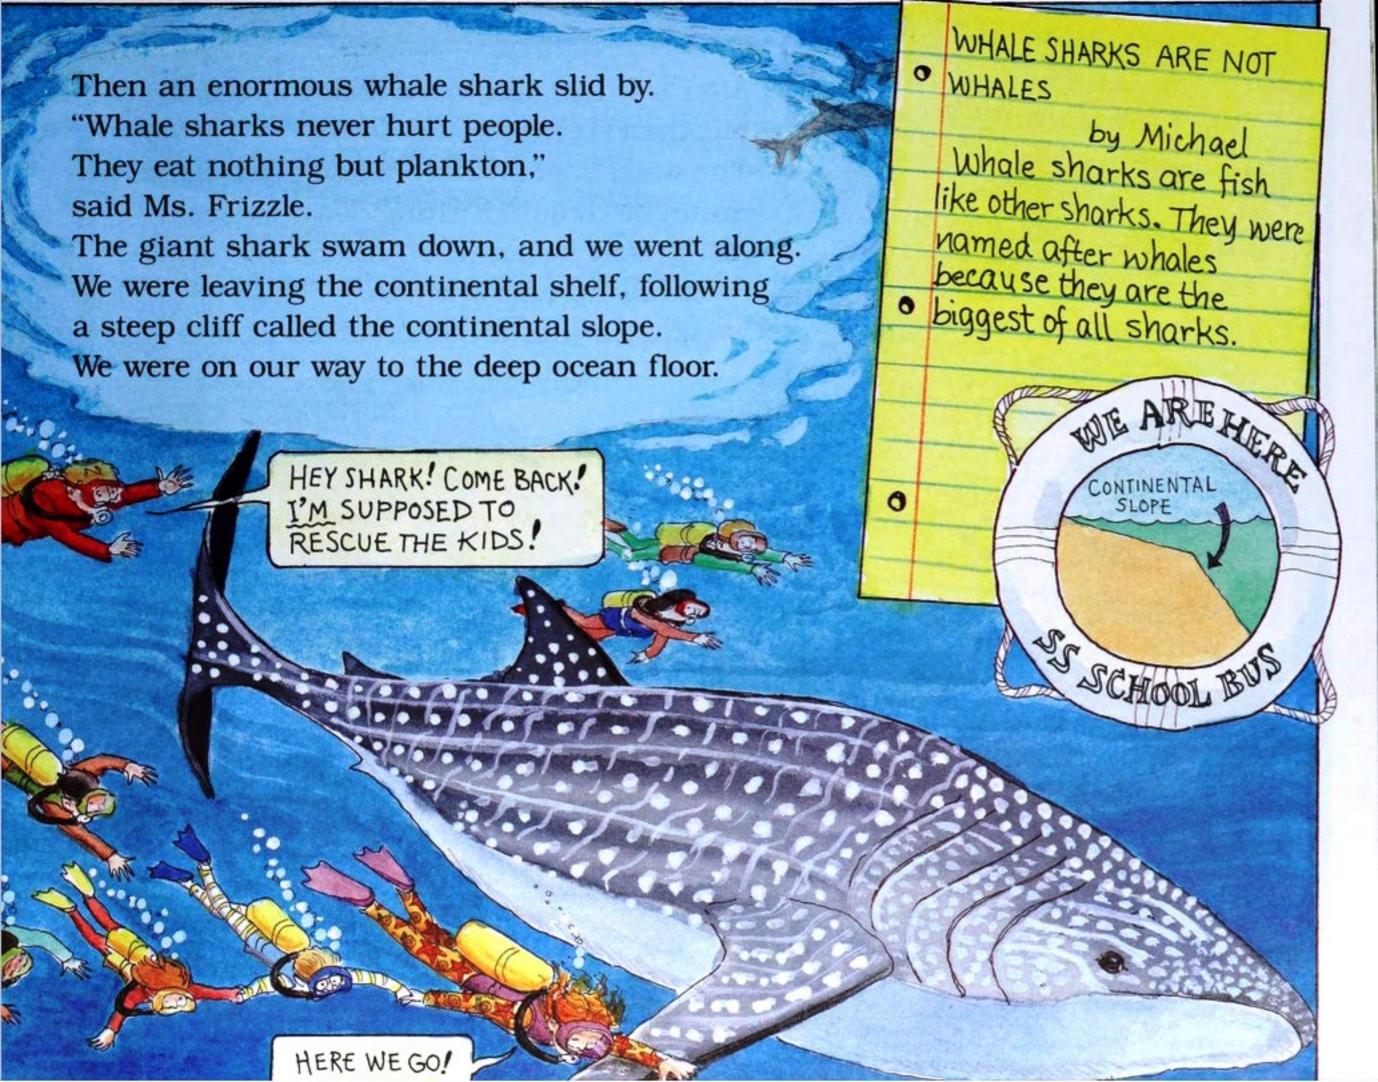

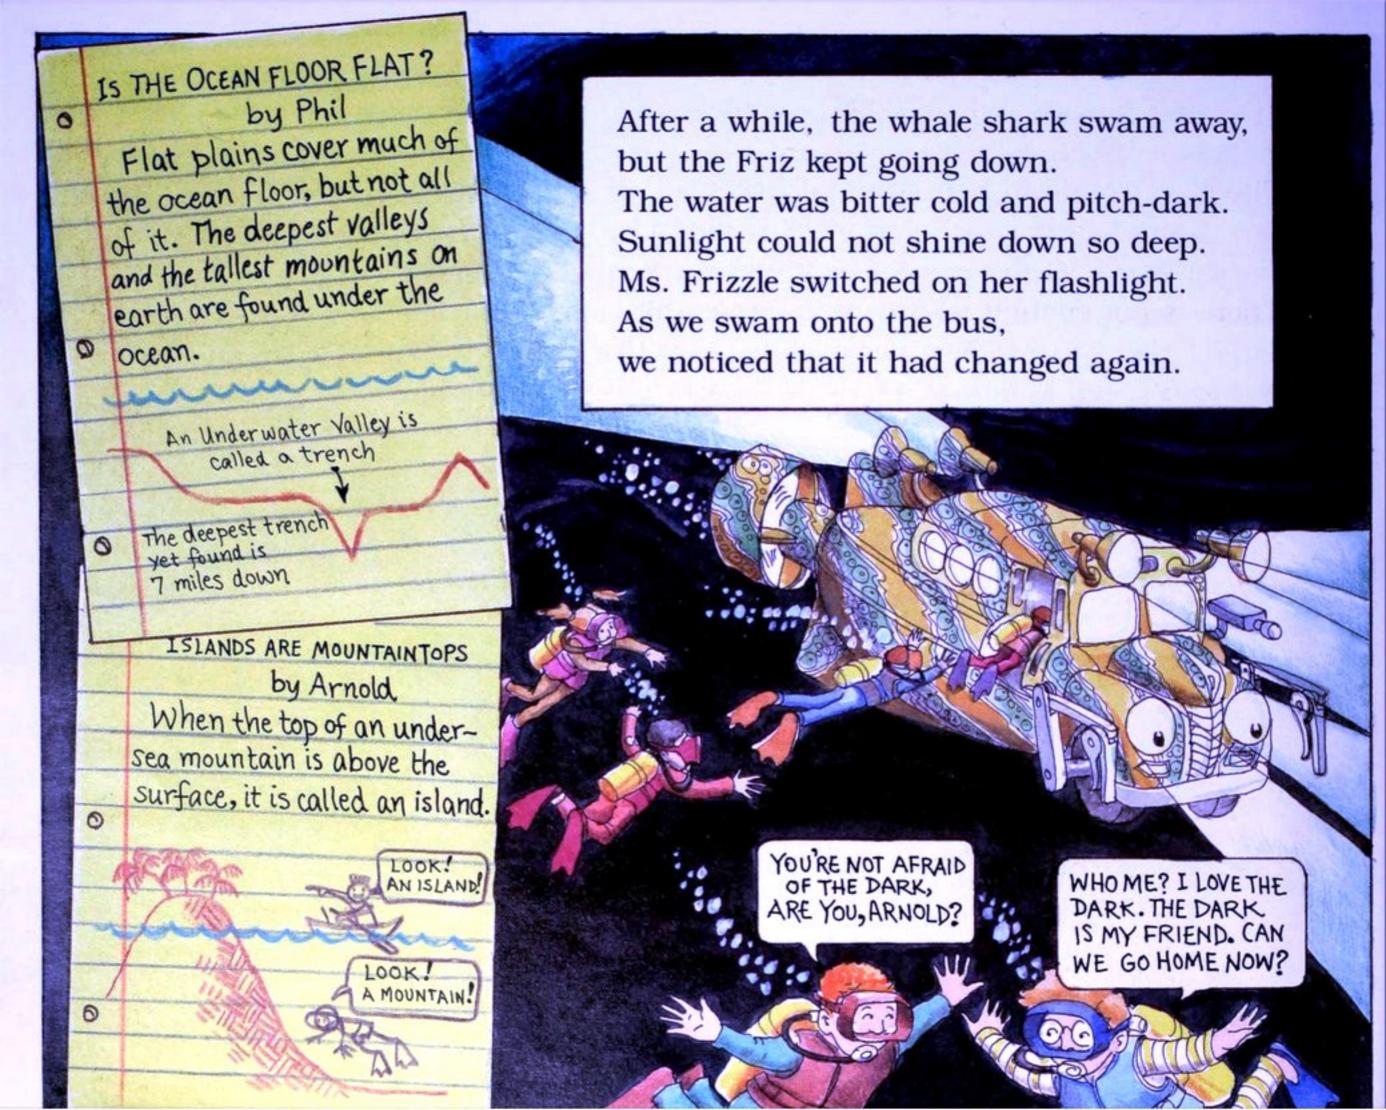

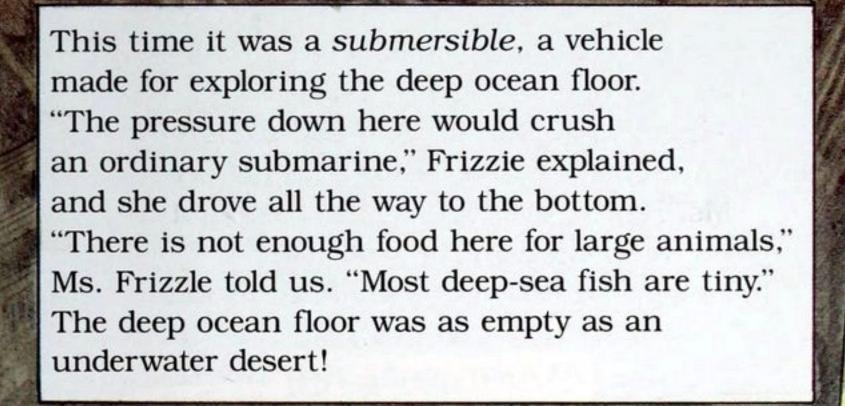

THOSE TINY DEEP-SEA FISH
CAN GLOW IN THE DARK.
THEY HAVE THEIR OWN
SPECIAL LIGHT, JUST AS
FIREFLIES DO ON LAND.

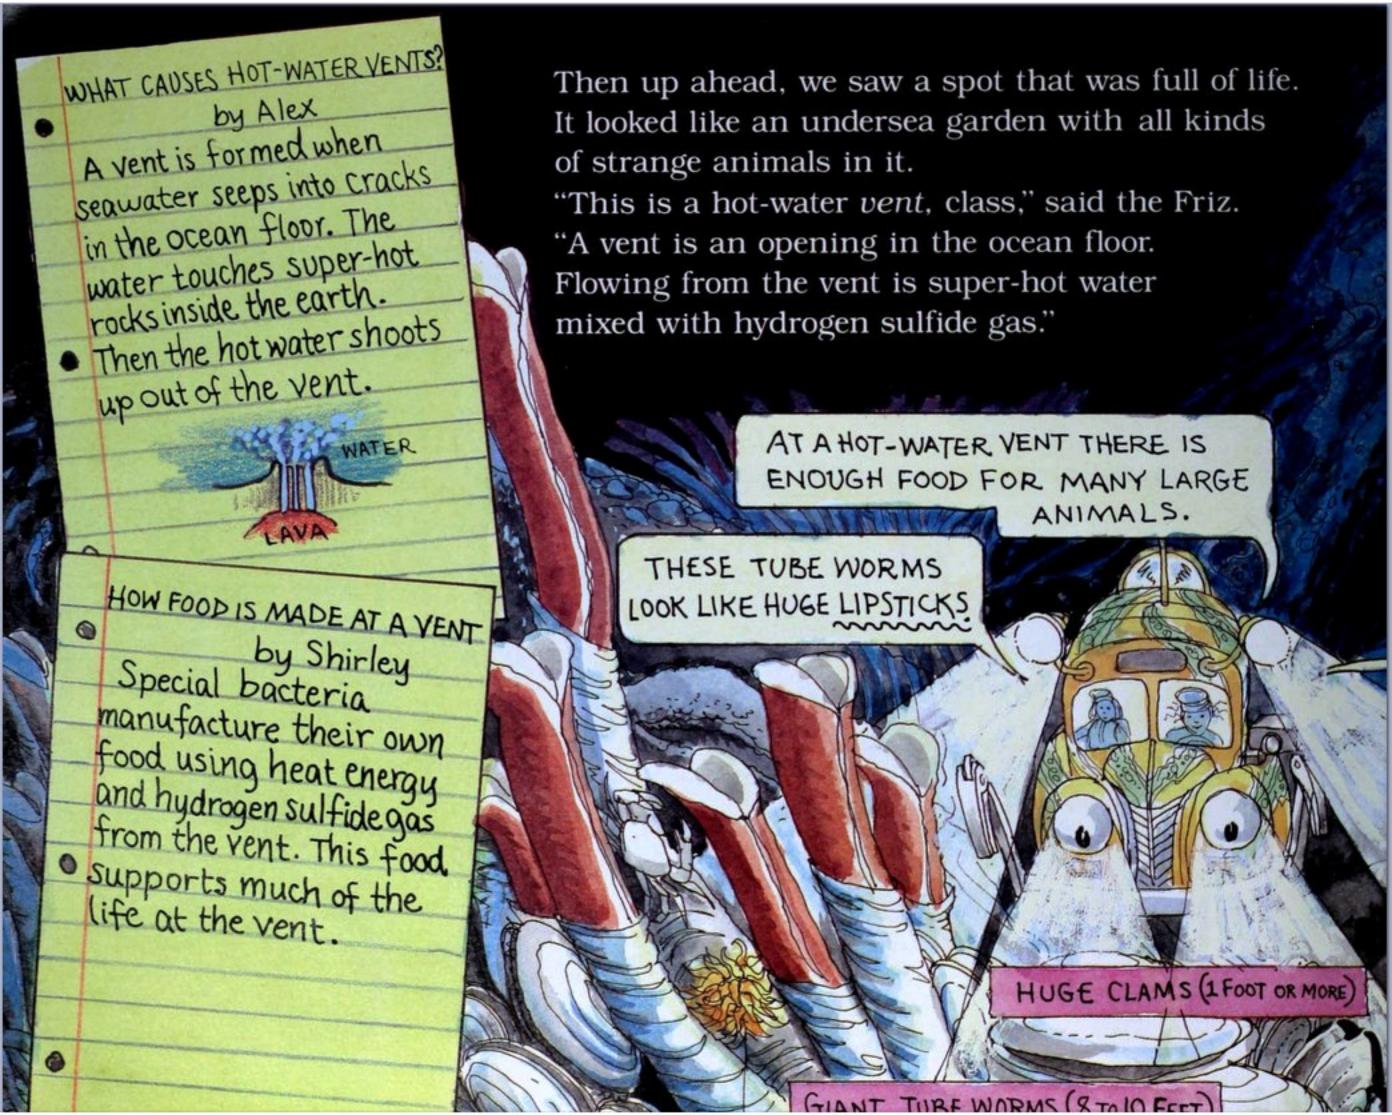

0

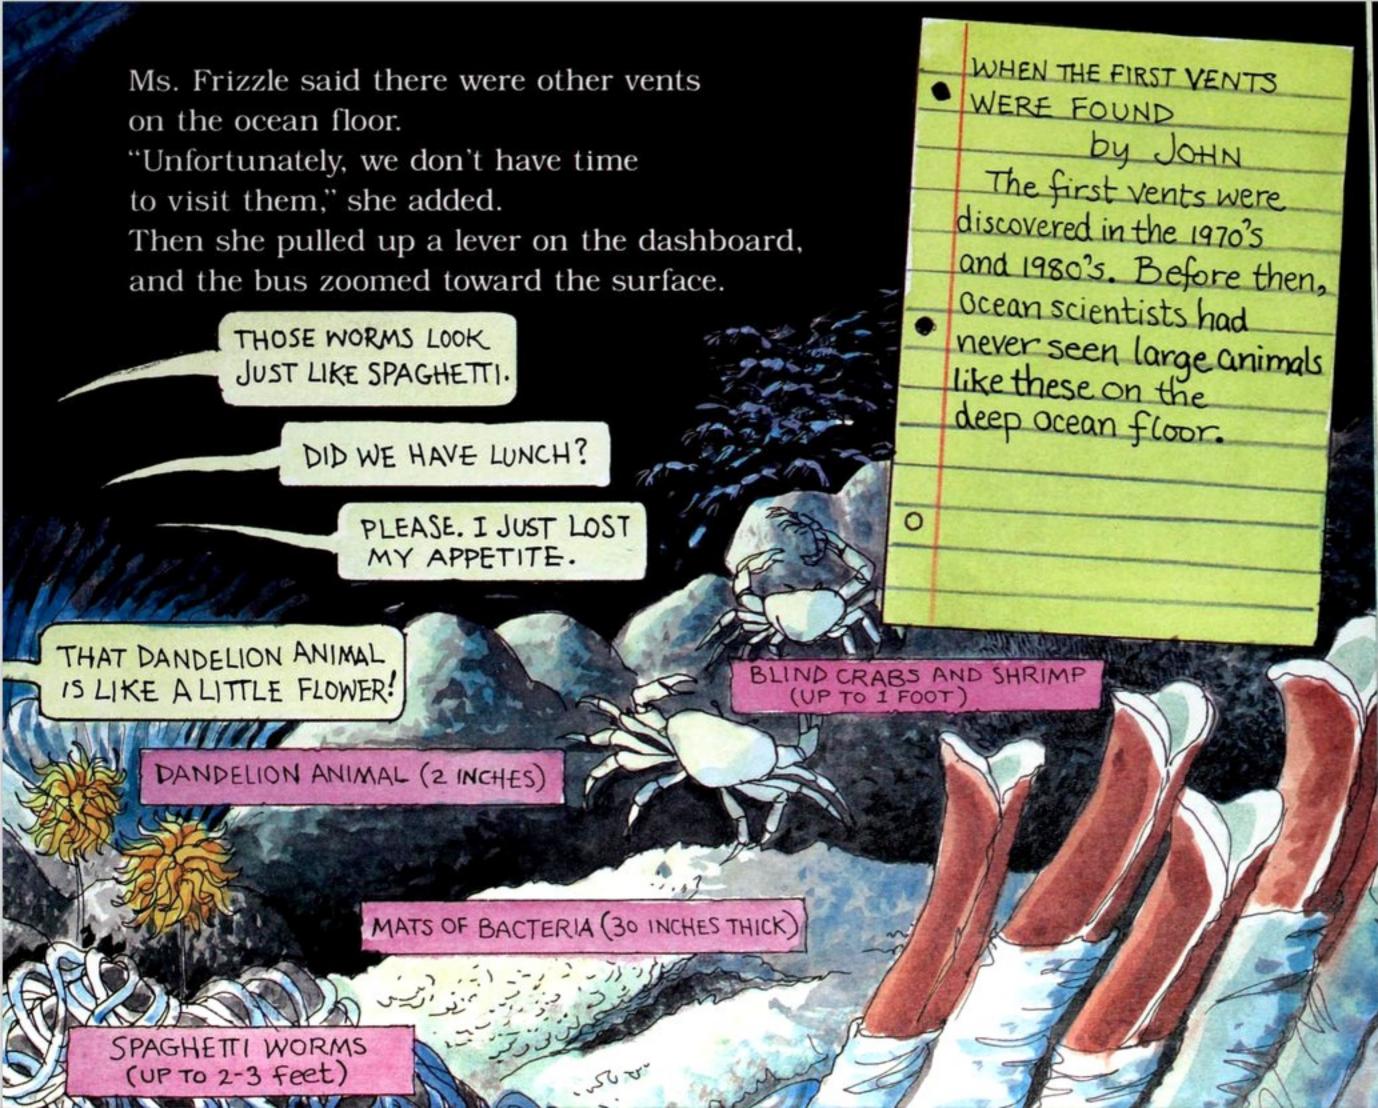

WHY PLANTS CANNOT GROW ON THE DEEP OCEAN FLOOR by Wanda
Plants need light to grow.
It is too dark for plant life on the Ocean bottom.

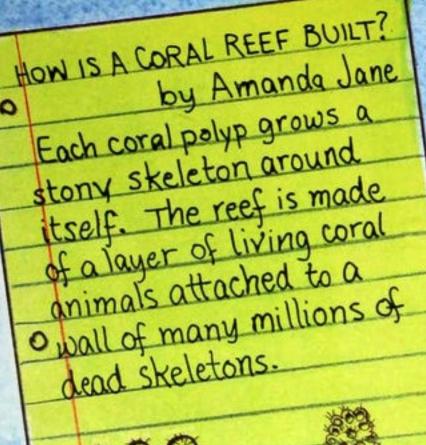

WHAT DO OCEAN-FLOOR
ANIMALS EAT?

by Shirley
Some deep-sea animals
depend on bits of food
that sink from the
upper ocean. Others
use their special lights
to attract prey.

Actual sizes of typical Coral

Each "pock mark" is a single coral animal.

How Coral Polyps EAT
by Rachel
Most corals feed at night.
Tiny arms come out of a
Coral's Stony skeleton.
The arms catch plankton
and pass it into the
Coral's Mouth.

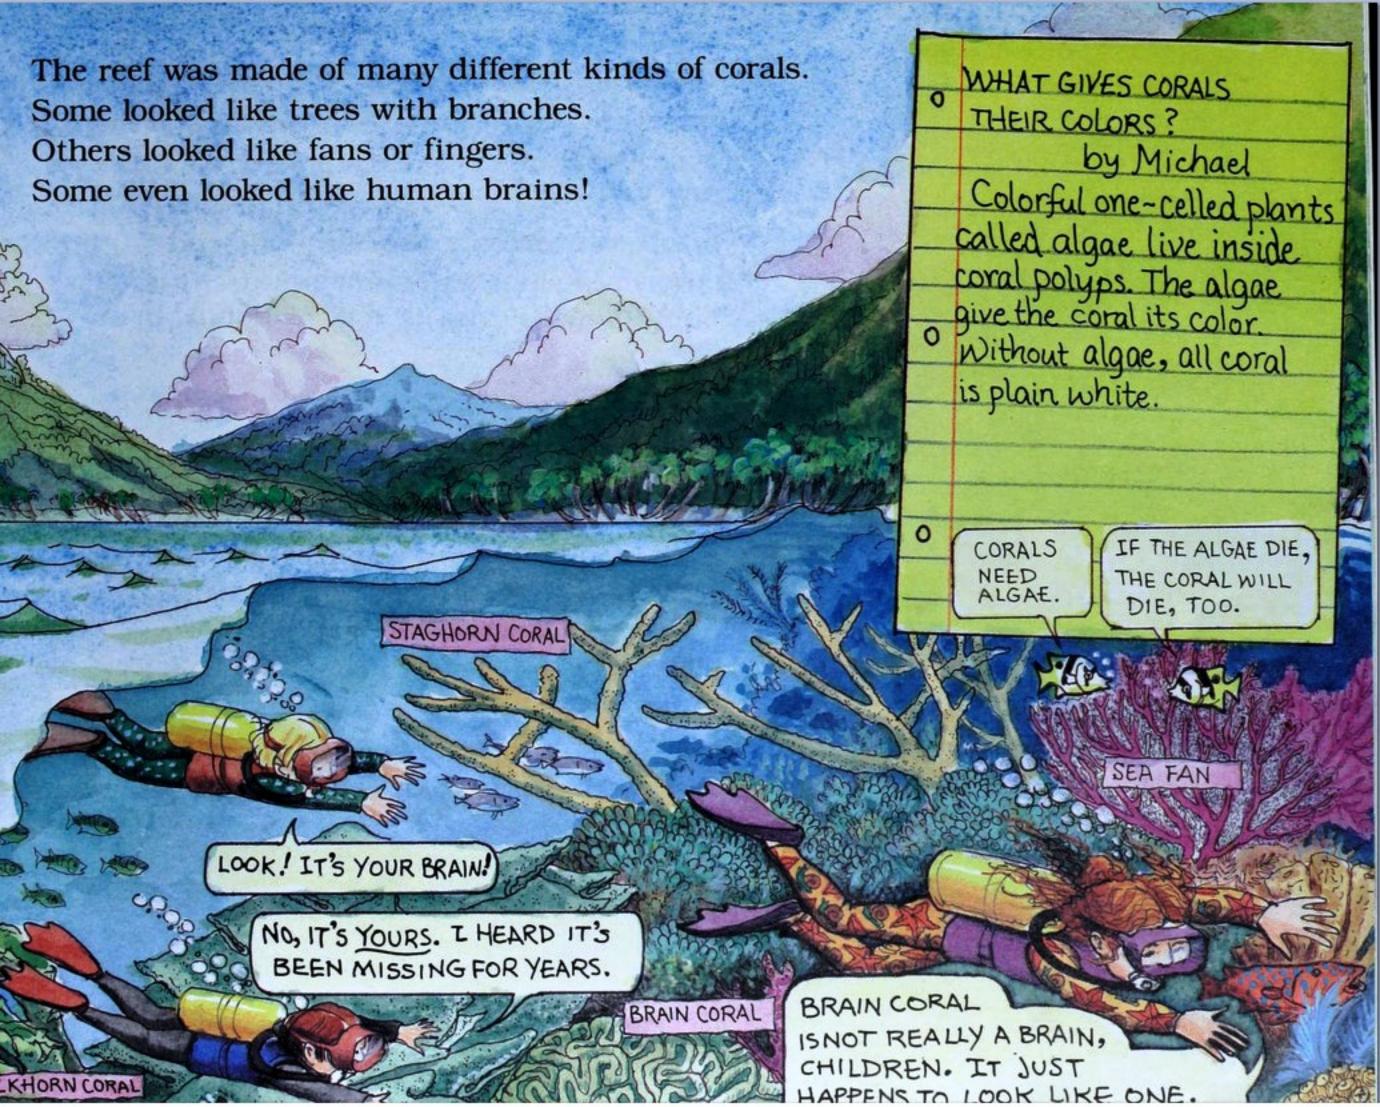

CORAL POLYP THE SAME POLYP

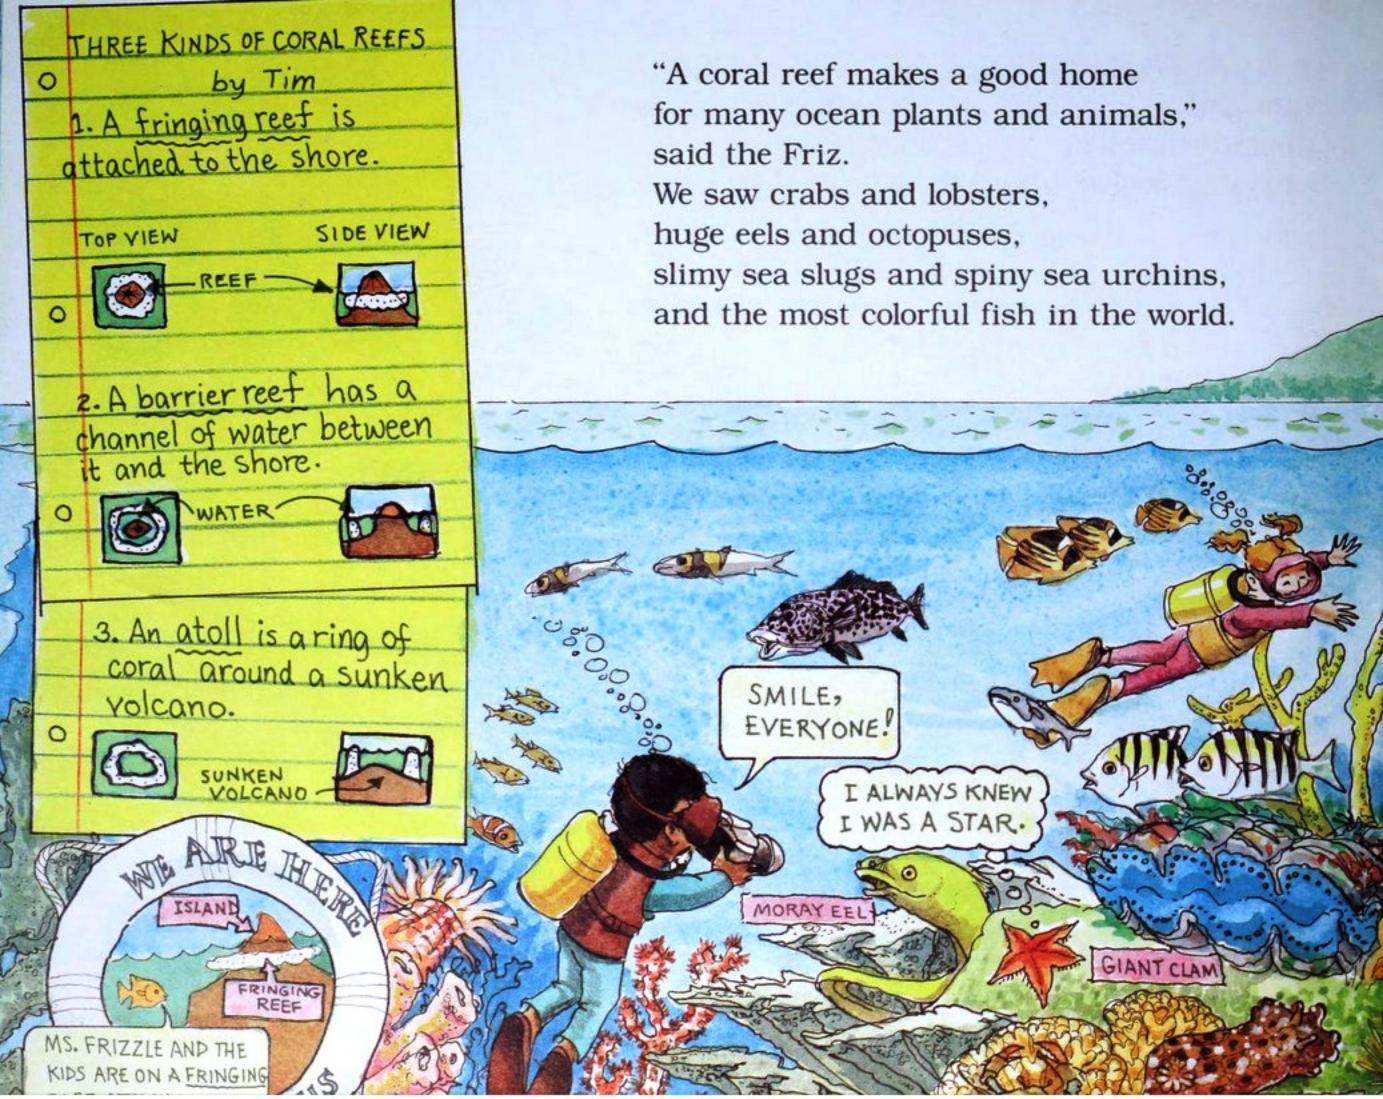

Soon we were motoring over the open ocean toward a sun-drenched island.

The bus had changed into a glass-bottom boat. Through the glass, we saw what looked like a wall made of colorful rocks.

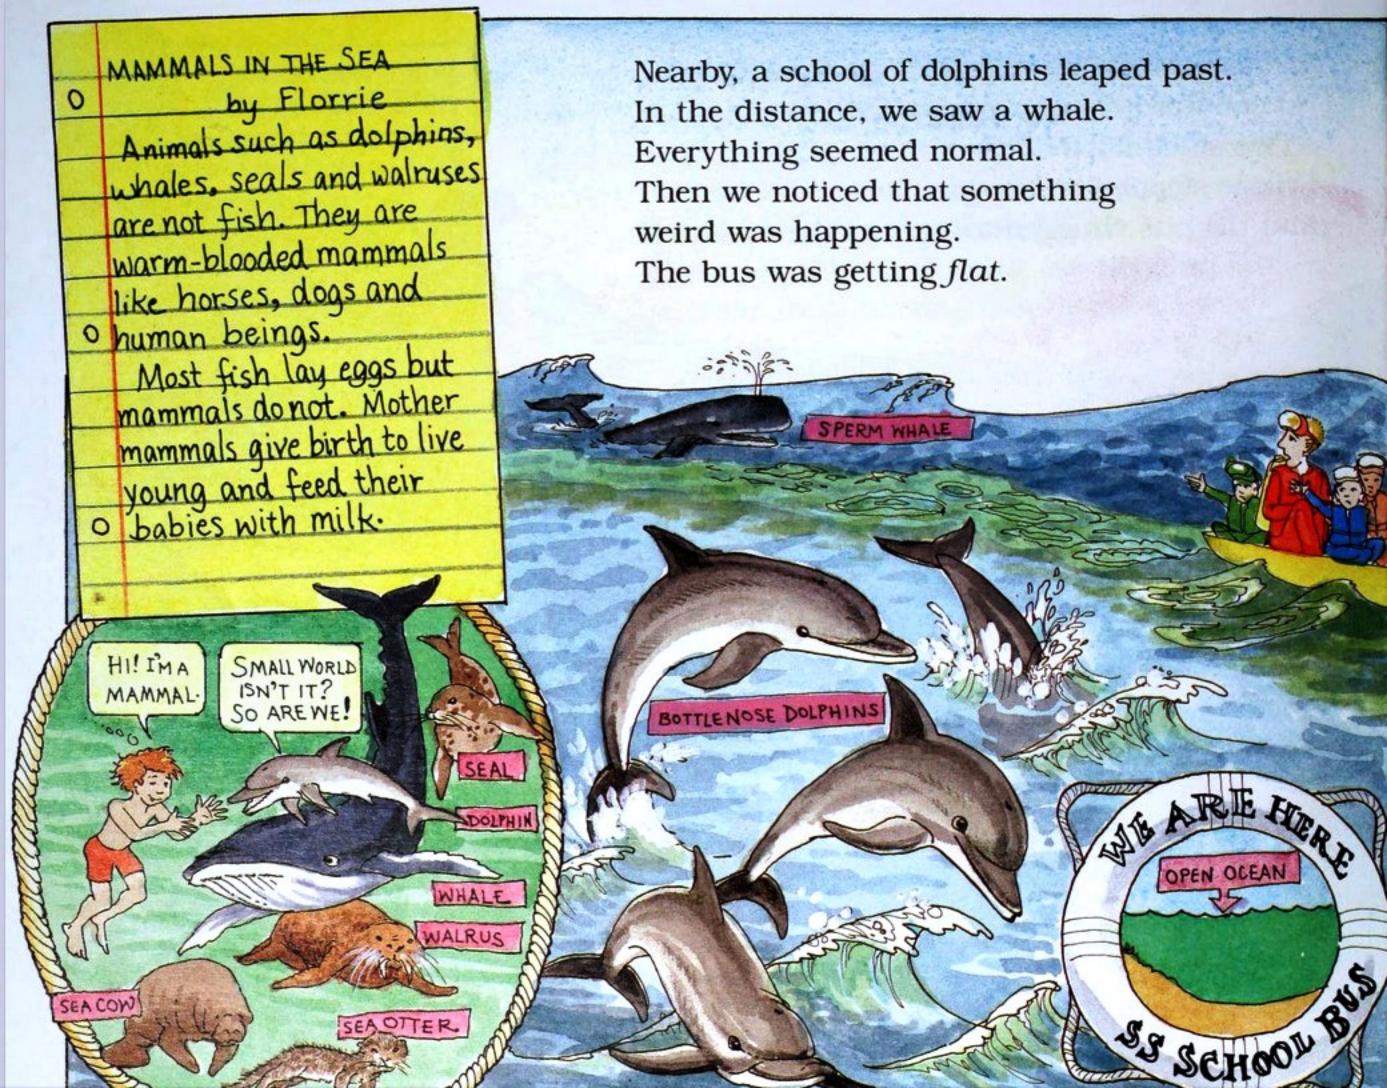

Ms. Frizzle said it was a coral reef, made of tiny animals called coral *polyps*. We dove overboard and began to explore.

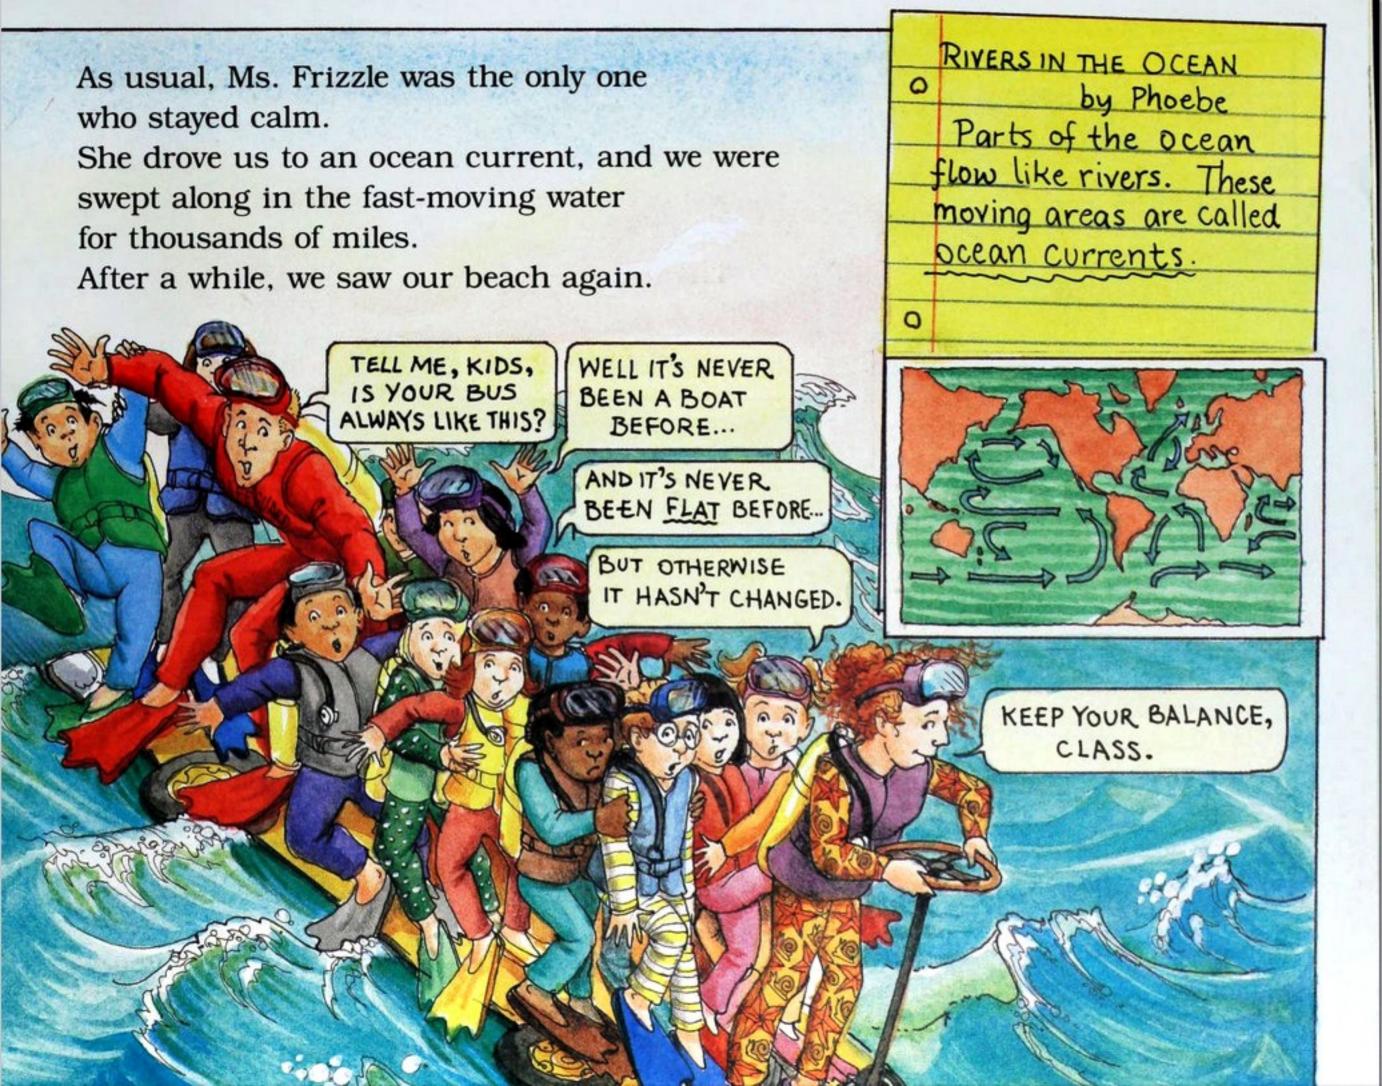

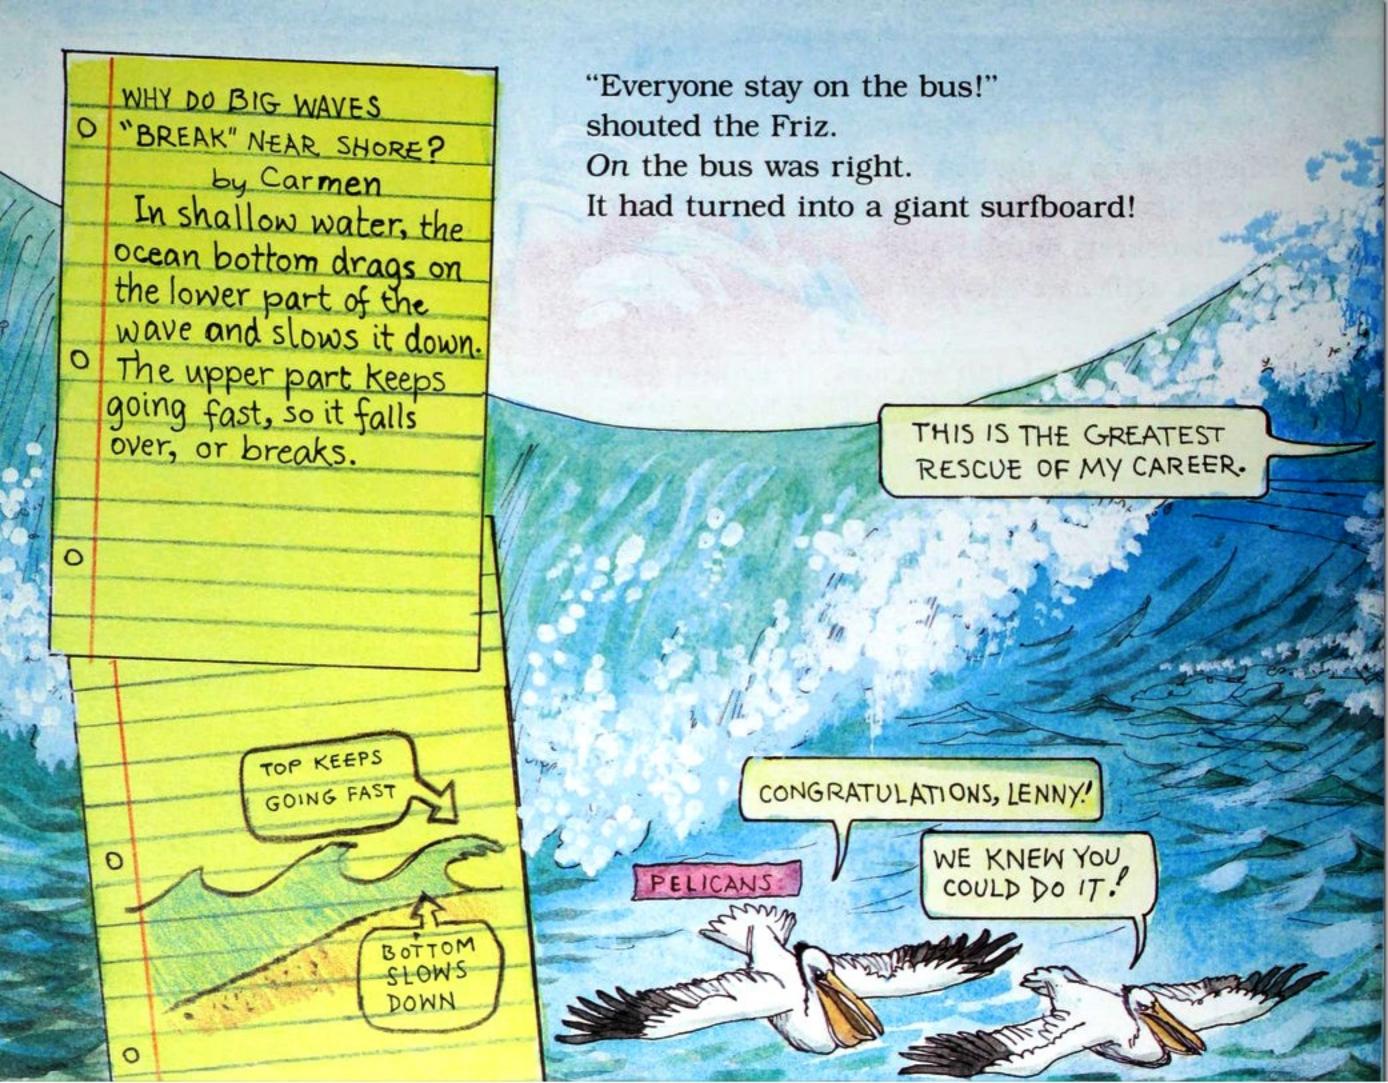

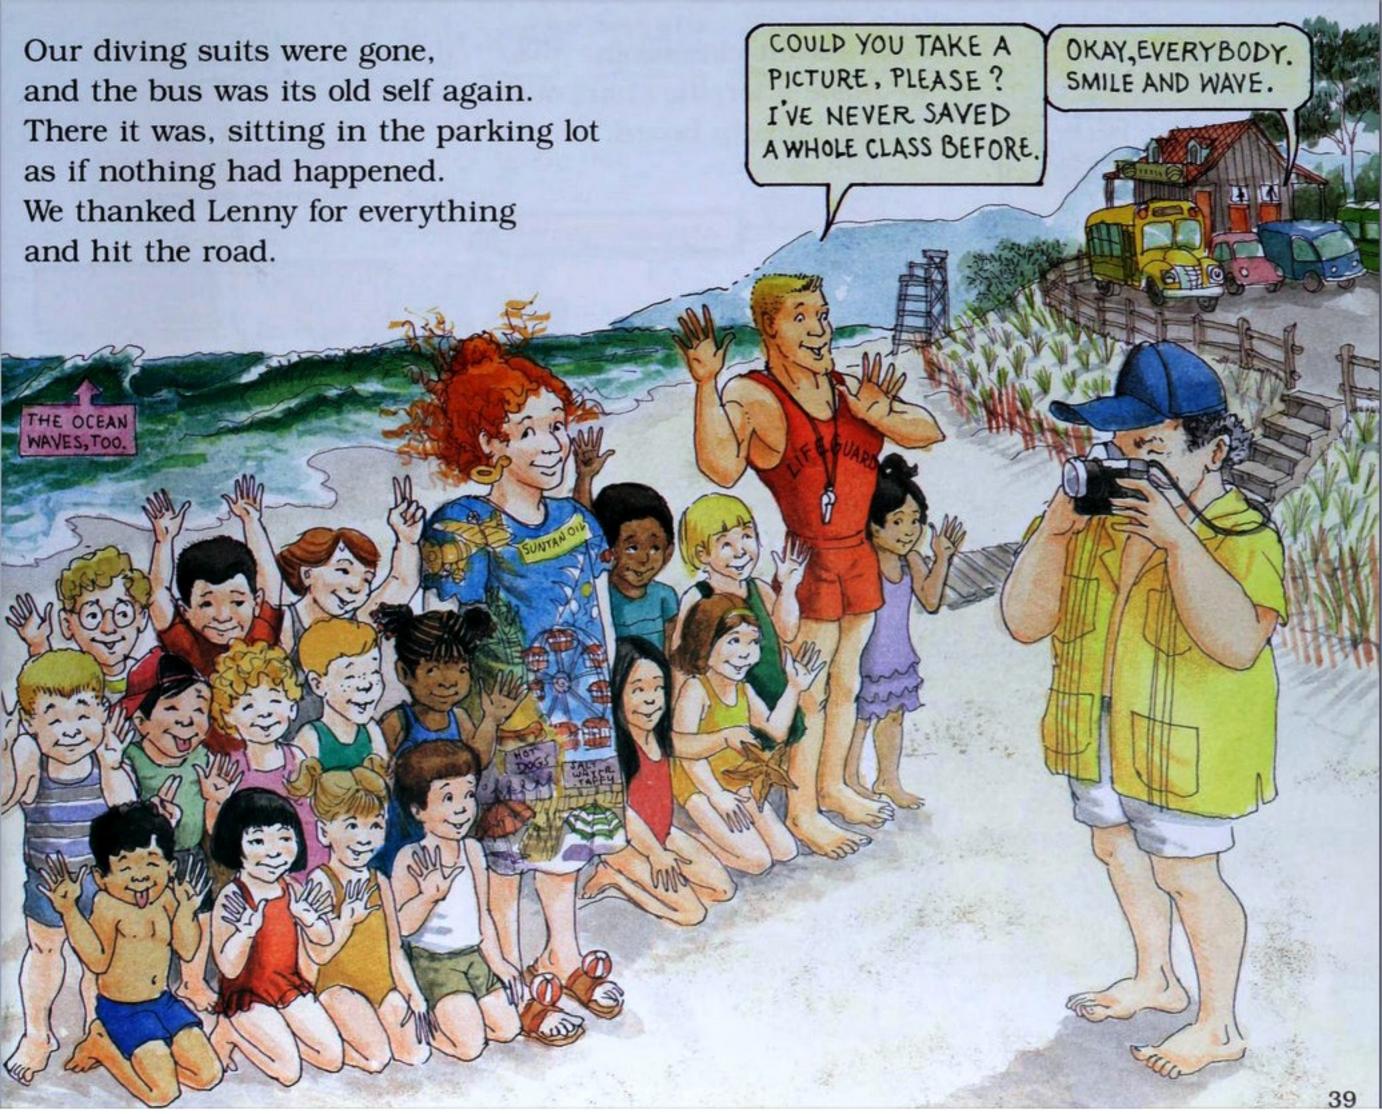

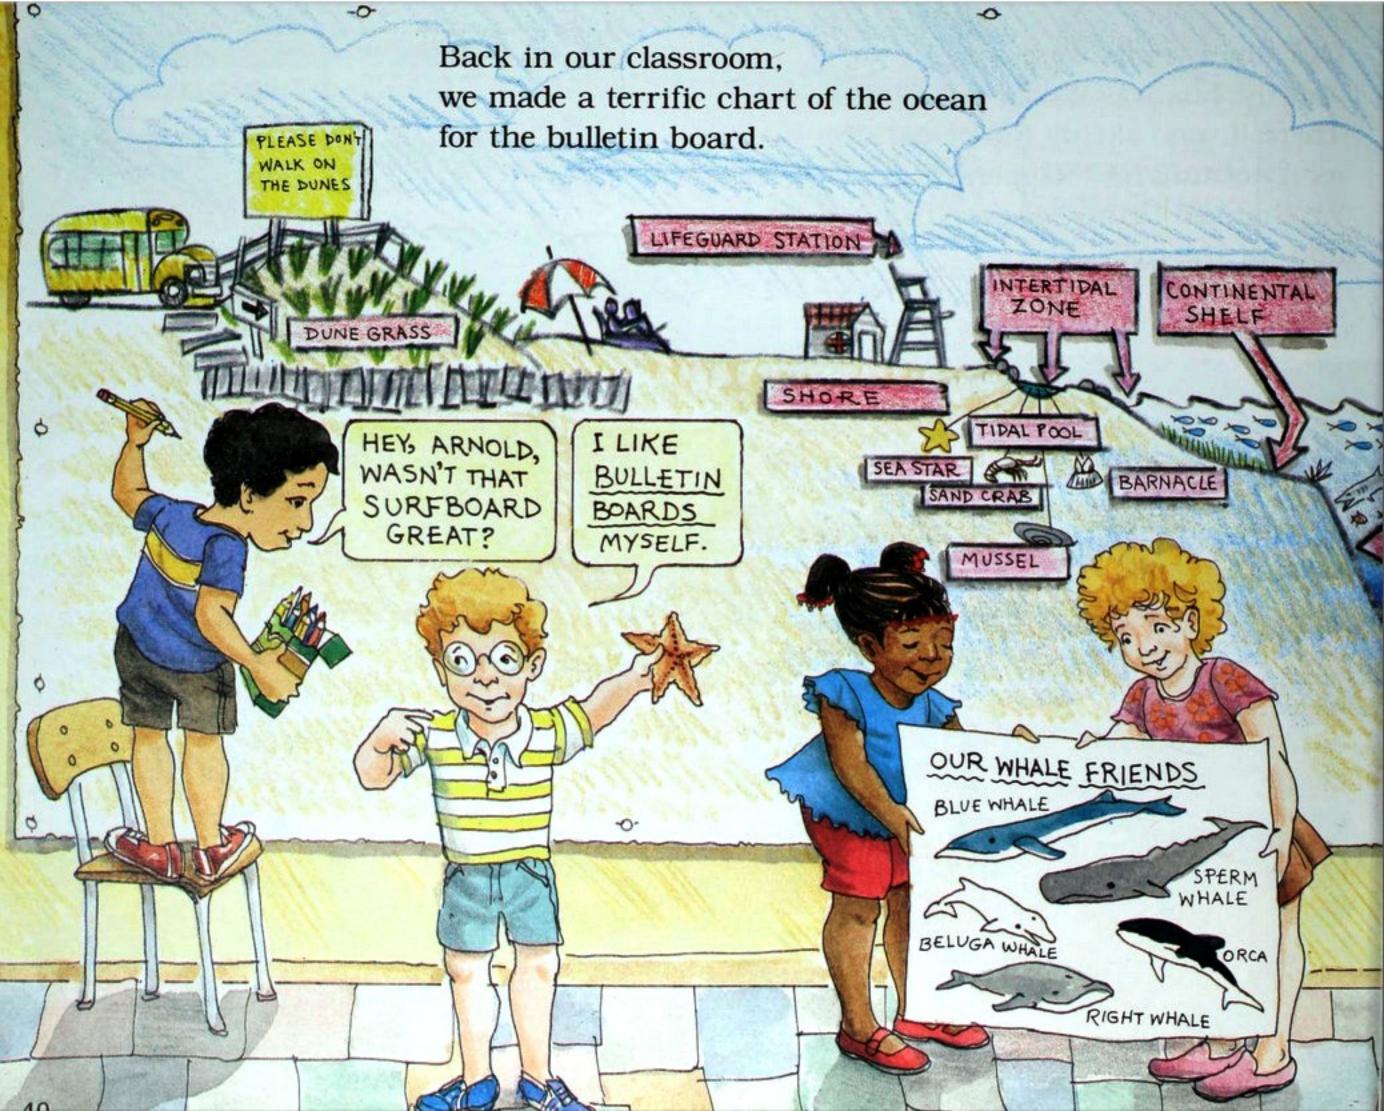

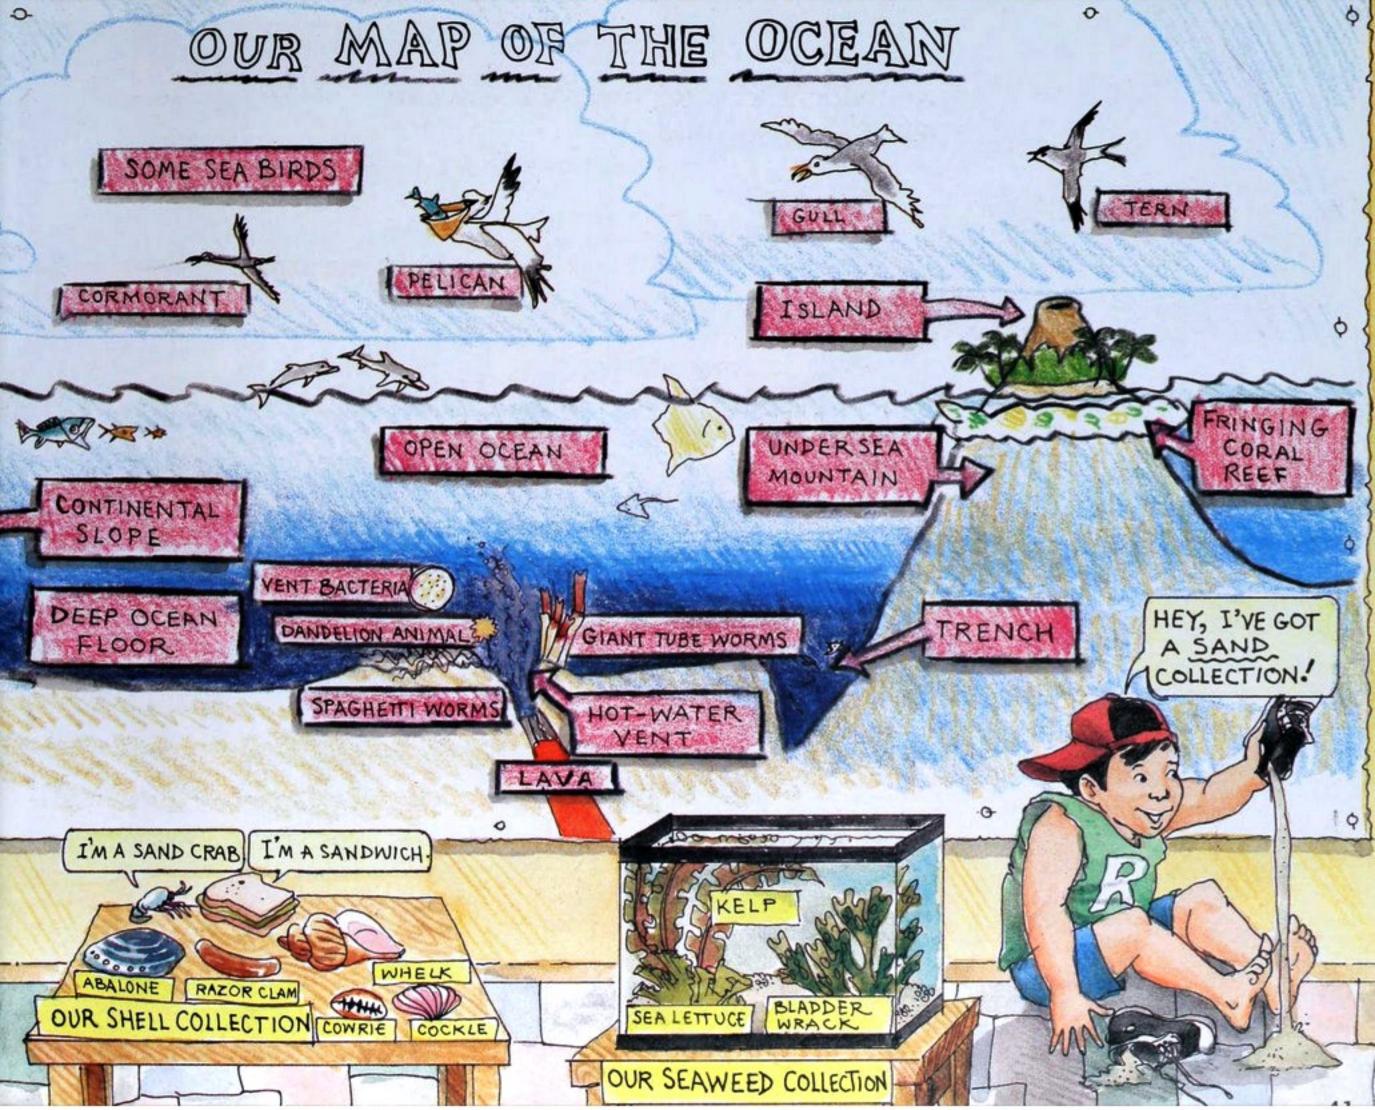

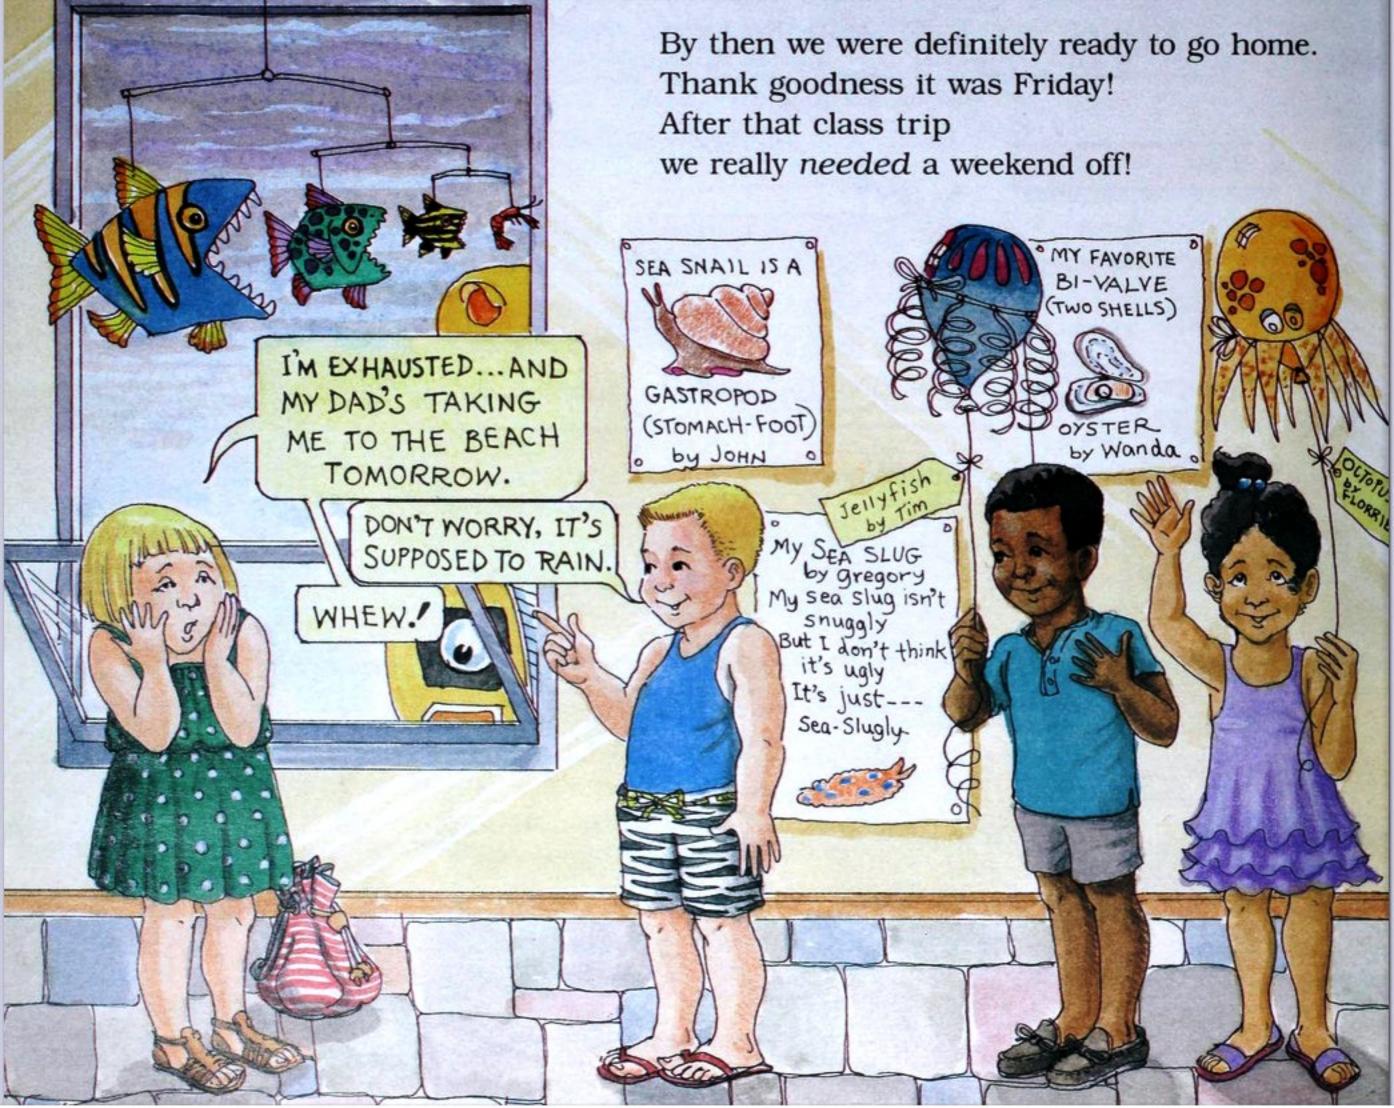

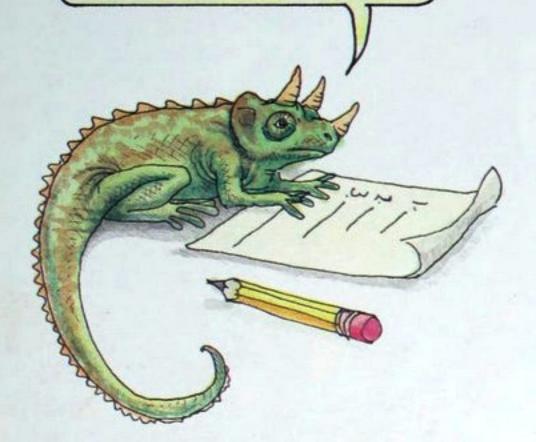

ARE TRUE,

AND WHICH THINGS

ARE MAKE-BELIEVE!

MULTIPLE-CHOICE TEST

First, read the question. Then read the three answers — A, B, and C. Decide which one is correct. To see if you were right, check the answers on the next page.

QUESTIONS:

- 1. In real life, what would happen if a school bus drove into the ocean?
 - **A.** The bus would turn into a submarine, then a submersible, then a glass-bottom boat, and finally, a surfboard.
 - **B.** The bus would stay a bus.
 - C. The bus would turn into a rubber-ducky.
- 2. Is it possible to explore the ocean in a single day?
 - A. Yes, if you travel by giant clam.
 - **B.** No, you couldn't do it in a day. It would take months, no matter how you made the trip.
 - C. Maybe. It depends on how long the day is.
- 3. In real life, can ocean animals speak?
 - A. Yes, but only when they have something important to say.
 - B. Yes, but too many bubbles come out.
 - C. No. Ocean animals do not talk.

ANSWERS:

- The correct answer is B. A bus cannot magically change into anything else. It also cannot run under the ocean. Water would seep inside and the bus would sink.
- 2. The correct answer is B. It takes a long time to travel thousands of miles through water. Even whales need months to migrate from one part of the ocean to another.
- 3. The correct answer is C. It is true that many fish make sounds, and whales and dolphins seem to communicate in a special way. But ocean animals do not use human language, and no one has ever heard a sea star tell a joke.
